Babylist Offers Free Shipping & Returns on Orders Over $45, Plus Exclusive Features on the Baby Jogger City Mini GT2 Double Stroller We offer free shipping & returns on orders of $45+ from Babylist. For more details, please visit our return policy page. The Baby Jogger City Mini GT2 Double Stroller features an all-new design with Forever Air rubber tires and all-wheel suspension for agility. The one-step fold makes it easy to deploy and stow away, while the adjustable handlebar and hand-operated parking brake provide added convenience. For your little ones, the stroller boasts a near-flat recline seat and calf support for maximum comfort. Full-coverage UV 50+ canopies with magnetic peekaboo windows keep riders shaded and allow parents to monitor their child's safety. With a weight of just 36.5 lbs, this double stroller is perfect for daily outings and running errands in the city. This stroller can accommodate up to 50 lbs per seat, making it suitable for children aged birth to 22 kg. It also integrates seamlessly with popular infant car seats from brands like Britax, Cybex, Graco, and Maxi Cosi. The Baby Jogger City Mini GT2 Double Stroller boasts a limited lifetime manufacturer's warranty on the frame and is designed to last for at least 4-5 years. The Baby Jogger City Mini GT2 Double is an amazing double stroller that excels at off-road excursions, as well as navigating city streets. Its multi-functional design and comfort features make it perfect for babies, while its long usability means you can use it for older kids too! This stroller has undergone some fantastic improvements in its latest version, which I'll be sharing with you. With a side-by-side seating configuration, the two riders face outward without blocking each other's view. The seats are incredibly roomy, with plenty of space for wiggling and turning during rides. Each seat can accommodate kids up to 50 pounds in weight and a maximum head height of around 26 inches, making it suitable for twins or siblings up to 5 years old. The main difference between the Baby Jogger City Mini GT Double and the City Mini GT2 Double lies in their fabric types. The former features a nylon material that's easy to clean with a damp cloth, whereas the latter has a jersey fabric which might be slightly more challenging to wipe down but is softer on babies' skin. Both strollers come equipped with adjustable 5-point harnesses for safe rider containment and can recline to near-flat positions for comfortable napping. The seats also offer infinite recline angles in between for optimal comfort, although they don't completely flatline even at their lowest position. This makes them suitable from around 3-6 months for passengers with good neck and head control. A notable improvement in the City Mini GT2 Double is the addition of an adjustable calf rest that allows for customized support whether the riders are sleeping or sitting up straight. The stroller also features seat back vents for extra ventilation when fully reclined, which is particularly useful during warm weather walks. However, it's essential to note that neither model can be used with newborn babies; Baby Jogger does offer bassinets that make these strollers suitable from birth up to 6 months, available separately and specifically designed for the respective models of the City Mini GT Double (2016) and the City Mini GT2 Double (2020). For situations where you have one infant car seat, both the Baby Jogger City Mini GT2 Double and the Baby Jogger City Mini GT Double can accommodate it, but if you're looking to use a newborn twin, there's an option to convert one of them into a travel system by attaching a car seat. The Baby Jogger City Mini GT2 Double stroller comes without adapters, requiring an additional purchase for infant car seat attachment. Adapters are available for various brands, including Baby Jogger, Graco, Cybex, and Maxi-Cosi. For parents using the 2020 model with twins, attaching two bassinets is a recommended option, providing a comfortable position for newborn babies. However, it's essential to choose the correct bassinet compatible with the stroller version. For those opting for the 2016 City Mini GT Double, multiple bassinet options are available, including affordable and premium choices like the Baby Jogger Compact Pram MB or Deluxe Pram. Keep in mind that the stroller doesn't fold with the bassinets, requiring additional storage at home and in vehicles. The canopy remains one of the stroller's best features, offering extensive coverage and a smooth UV50+ material. Compared to its predecessor, the 2020 model boasts a more sophisticated design while maintaining the same three-panel canopy structure. The new City Mini GT2 Double also introduces magnetic enclosures for peek-a-boo windows, providing improved convenience and visibility. This feature is particularly notable when using the stroller with multiple panels closed. The Baby Jogger City Mini GT2 Double features a magnetic closure for its peek-a-boo windows, replacing Velcro on older models. While mesh windows would be ideal for increasing airflow, this is a minor issue that can be mitigated by using seat top vents when the seats are reclined. The handlebar has undergone some changes, with the lower part featuring rubberized rings and the upper part being smooth. This design allows for easier cleaning and durability during storage or transport. The height-adjustable handlebar enables users to find a comfortable pushing position, which is particularly useful for tall parents who may experience back pain from prolonged slouching. Adjusting the handlebar height is straightforward, requiring only a simple push-in-and-rotate motion. While a telescoping handlebar would be ideal for increasing clearance between the foot and rear axle, the rotating design still offers benefits for taller users. The hand brake operates similarly to older models, with the main difference being its position on the frame rather than the handlebar. This positioning ensures it doesn't interfere with pushing the stroller. The handbrake's position on the frame gives you more handlebar space for easy steering and eliminates worries about damaging office sandals with an unforgiving foot-operated brake pedal. Now, let's shift focus to two key features that distinguish a great stroller from one that's merely adequate: wheel type and size, and suspension system. These factors dictate what you can do with the stroller and where you can take it. The 2020 City Mini GT2 Double features rubber-filled (not air) wheels, measuring 8.5 inches in size. The front wheels boast a 360-degree swivel capability for excellent maneuverability, which can be locked into place to ensure smoother long rides. A notable upgrade over its predecessor is the inclusion of an all-wheel suspension system, providing superior shock absorption and making it possible to tackle various terrains such as cracks, bumps, debris, grass, mulch, old bumpy sidewalks, and cobblestone. While it may not be ideal for loose sand or trails with many roots, this stroller is well-suited for everyday errands in the city and discovering new paths in the countryside. The Baby Jogger City Mini GT2 Double Stroller 2020 boasts redesigned wheels and upgraded suspension. It also features a spacious storage basket, although it's divided by a central bar that limits its capacity to accommodate larger items like medium-sized diaper bags. However, you can still fit many essentials or your handbag within the available space. One drawback of this stroller is the persistent central bar in the storage basket, which blocks access and reduces the overall storage capacity. This flaw is particularly notable given the double City Mini GT 2016's focus on running everyday errands and shopping. Despite this limitation, two additional pockets are provided on the back of the seats for storing smaller items like keys, phones, or wallets. City Mini GT2 Double! Now, adjustable calf rests let you access the storage basket from the front. This makes sense when both seats are fully reclined and you need to grab small items. You can still get some stuff out with the front access, even though there aren't many changes in size. The stroller measures 44″ x 29.75″ x 30-43.5″ and weighs around 32 pounds – it's bulky and heavy, but within the range of other side-by-side doubles. While it may be intimidating to lift regularly, you'll get used to it. Baby Jogger City Mini GT2 Double has a special folding technology called fold™ that lets you close the stroller easily and flat when needed. Just pull the straps in the middle of the seats, and it folds itself! This is one of the best (if not THE BEST) folding systems I've used. Both strollers have an automatic lock to keep it closed and compact for storage or transport. The folded dimensions are 12.5″ x 29.75″ x 31″. One drawback: it doesn't stand on its own when folded. We'll see how pushing the City Mini GT2 Double is like, but judging from its predecessor, I expect a smooth ride and easy maneuverability in crowded areas. The rubber wheels and full suspension system suggest it can handle various surfaces. Baby Jogger City Mini GT Double Stroller - A Comprehensive Review The Baby Jogger City Mini GT2 is a top choice among parents due to its affordability and impressive feature set. Priced at around $360, it offers many of the same features as strollers costing over $1,000. Several key factors contribute to its popularity, including its sturdiness, dependability, and one-handed fold. You can turn this stroller into a travel system if you prefer or keep it within the Baby Jogger family with their ready-made option. If you want a pram for newborn walks without needing a car seat, that's also available. The weight limit is around 65 pounds, roughly equivalent to a 6-year-old child's size. The City Mini GT2 has one limitation: its seat can't be swapped out, so the baby will face forward unless using it as part of a travel system or with an infant pram attachment. However, the stroller does recline flat and comes with a large canopy that offers shade and peekaboo windows for spying on your child's activities. The GT2 boasts premium features like all-wheel suspension at a lower price point compared to similar high-end strollers. If you don't mind sacrificing some details like leather trim or extra storage space, the City Mini GT2 provides great value, especially for city dwellers. For a more detailed look and personal assessment of whether this is the right choice, consider watching Lisa's video review.
