

## Company

LiveSchool is on a mission to build thriving school cultures that make students jump out of bed in the morning. We're transforming how schools reach their goals by putting student engagement at the heart of every interaction. If you want to turn every school into a thriving community – you're in the right place!

## Role Overview

This is a remote position with TBD company-paid visits to Nashville, TN. As a QA Engineer at LiveSchool, you will test and help ensure the quality of our software that is used by educators across the world. You will prepare, build, and run scenarios and tests to cover the use patterns of our growing set of features. Your role will include:

- Manually testing individual UI components, specific features, and the entire LiveSchool frontend built on a Javascript framework
- Writing and maintaining documentation on expected product behavior
- Investigating, reporting, and re-testing bugs found in the application in order to ship quality code to customers
- Managing, updating, and extending automated integration test coverage using the Cucumber testing framework, in collaboration with engineers when needed
- Attending planning meetings and collaborating with engineers and product managers to understand the product evolution
- Building detailed testing plans in coordination with planned release schedules to ensure that we ship quality code on time
- Helping triage and investigating bugs, errors, or issues in collaboration with product managers and Customer Success team members, and turning findings into clear tickets for engineers.
- Enforcing and checking the quality of the company's analytics stack

## Requirements

We are looking for a US-based person with an interest in education and technology, including:

- Experience in JavaScript, HTML, and CSS and the usage of website and mobile technologies
- Experience writing automated software tests in Cucumber (or other test automation frameworks)
- Exquisite attention to detail; a systems thinker who understands dependencies in complex workflows
- Drive, communication skills, and passion for quality
- Light project management experience is a bonus
