TIMOTHY STONE

Smartwatch User Manual

1. FUNCTIONS

HEALTH AND EXERCISE

-Pedometer

Built-in accelerometer checks and tracks your exercise time, fat burning, temperature, speed and distance.

-Sleep Monitor

Built-in accelerometer checks and tracks your sleep and monitors your health.

-Sedentary Alarm

Built-in accelerometer notifies when you've been sedentary for a long time so you get up and take a break.

SMARTPHONE ASSISTANT

-Sending information

After connecting your smartphone to the smartwatch and installing the APK app, the watch will provide you with all typical modes of communication. And given that it's on your wrist, it can add a physical aspect to alerts and notifications. For example, you'll feel a light touch with each message received. (Caller ID notification, SMS notifications, push notifications for messages from: QQ, WeChat, Twitter, Facebook, WhatsApp, news and information from applications, system configuration, programmed alerts, scheduled reminders, setting the time, etc.)

-Bluetooth Telephone

After connecting your phone to the watch, all your calls will be sent to the watch via Bluetooth. And since you have it on your wrist, it will let you know by vibrating and a notifying ringtone if you don't realise that you have an incoming call.

-Bluetooth Messages

After connecting your phone to the watch, SMS messages will be transferred to the watch over Bluetooth. And since you have it on your wrist, it will let you know by vibrating and a ringtone notification if you don't realise that you are receiving a message.

-Remote control for the camera

After connecting your phone to the watch, you can control the phone's camera remotely, making self-portraits and group photos easier.

-Anti-loss

After connecting it to your smartphone, it will let you know by vibrating or an alarm sound when the watch is out of Bluetooth range. Additionally, you can look for the watch using your phone and vice versa when both are within Bluetooth operating range.

-Anti-loss

If you put a SIM card in the watch you can make and receive calls, as well as send, receive and respond to SMS messages.

COMMUNICATION AND SOCIAL NETWORKS

If you put a SIM card in the watch you can make and receive calls, as well as send, receive and respond to SMS messages.

ENTERTAINMENT

Enjoy life with a music and video player, recorder, camera, etc.

PERSONAL ASSISTANT

The smart watch can also be your personal assistant, with a photo album, agenda, calculator, personalised themes and other features.

DATE AND TIME

High quality watches have always been characterised by their accuracy, and your Timothy Stone smartwatch is no exception. It even lets you customise the watch face (3 options) to display the time in a more personal and meaningful way, inline with your life and schedule.

To change the watch face:

1st Method: Turn on the device, when it is in watch mode press the centre of the screen and select the face you prefer.

2nd Method: Turn on the device. Go to the main menu-phone settings-stand-by screen menu-unlock. Choose the face you prefer.

2. PACKAGING CONTENTS

1. Timothy Stone smartwatch, 1 micro USB cable, 1 user manual

3. INSTRUCTIONS

-Security password

The initial password is 1212. Thanks to this option, you can avoid other people using your watch without permission. To guarantee the security of your information, please change the initial password.

Download synchronisation software

- Android Phones

Download the application FunDo SmartDevice from your Android application download platform, Play Store, or scan the QR code from the box. Download the application to sync it with your Android phone. This application is used only to sync the watch with your phone, it won't consume mobile data.
If the related software has finished downloading, check the version and use the most recent sync software available to ensure it is working correctly. Update the sync software each time there's a new version.

-iPhone

Download the application Mediatek SmartDevice from your IOS application download platform, App Store.

Bluetooth connectivity and synchronisation feature

-From the telephone to the watch

Configure for the watch: activate Bluetooth, search for devices and select "pair device" when "SW15 Prixton" is found, accept it on the telephone as well to complete the connection.
Select "yes" when you receive a contact list request. Furthermore, it's better to choose "don't remind again", so that this won't appear every time the connection is made.

Note: The synchronisation software can open the application if it's already installed and accessible. The mobile phone will indicate when the Bluetooth connection has been established after 2 to 5 minutes. The watch will also notify about the Bluetooth connection. At this time synchronisation will be activated. Messages received by the telephone will sync with the watch.

- From the watch to the phone
Access the watch with Dial Bluetooth, press Search for new device. Once your telephone has been found (e.g., Samsung S5), select connect. The rest of the process is the same as described in previous point.

4. OTHER NOTES

-Charge the battery fully before using the watch. Charging time is around one hour.

-Bluetooth can't be disconnected once the devices are out of range. After activating the anti-loss feature, the search feature won't be available until the Bluetooth connection is re-established.

- If at any time the Bluetooth connection is lost, re-establish it again. You must accept contact synchronisation to be able to access your contacts on the watch.

- If when playing music, some of the names are not displayed. This is normal and due to the internal functioning of Android.
