

## Job Title

Quality Assurance Analyst

## Location

New York City · Full Time

Boomset is a leading event solutions provider powered by NFC, mobile, and cloud-based technology. By combining innovative products with customizable professional services, Boomset optimizes events and delivers actionable data leading to a stellar attendee experience. Boomset event solutions include online registration, onsite services, badge printing, access control and tracking, lead retrieval, reporting, analytics, and more. Boomset operates on six continents and services thousands of exhibitors and over 1.5 million attendees annually.

## Job Description

You will be responsible perform front-end (functional) and back-end (database, stress) testing of web & mobile applications.

## Requirements

- Bachelor's degree in computer science, software engineering, information technology or relevant business discipline from an accredited four-year college or university.
- Experienced in testing software all the way from unit testing to system testing to integration testing. A strong desire to build well-tested software, preferably through test automation
- Experience using Selenium or similar testing frameworks for web applications
- Experience with version control software, preferably GIT
- Experience with defect tracking tools, preferably ZenDesk
- Experience with build and release management, preferably JIRA
- Knowledge of object-oriented programming language(s) (C++, Java, Python or Ruby) and new technology stacks and how they relate to software testing
- Familiarity with software development life cycle (SDLC) and agile methodologies
- Ability to work with relational and non-relational databases to manage and verify data. Preferably MySQL & MongoDB.
- Working understanding of HTML, CSS, JavaScript testing frameworks. Preferably Mocha.js and Chai.JS
