## **Job Description**

We are seeking an Information Security Specialist to join our team and play a leading role in building and executing security processes, RACIs, KPIs, procedures, guidelines and ensure relative awareness of all involved stakeholders.

## **Responsibilities**

- Establish mechanisms, conduct assessments to identify IT Risks and compliance issues; develop, and recommends corrective action plans for resolution
- Responsible to ensure IT and data compliance and practices are considered in projects, initiatives, new implementations and operational tasks
- Support the design and implement related security system and tools based on information security architecture
- Analyze and implement the data security and privacy solutions for requirement
- Establish management and configuration standards of security systems (IPS/IDS, WAF, Proxy, URL Filtering, NAC, VPN, DLP, database activity monitor, endpoint security solutions)
- Build and effectively operate Security Incident Event Management (SIEM) systems and incident response tools
- Communicate with the relevant unit responsible to review the status of the risk processing plans and complete the actions on time

- Hold information security expertise for Infrastructure and System projects, provide the units with information as consultant, support project coordination
- Analyze information security needs, receive and evaluate expectations and keep internal customer satisfaction at the highest level.
- Author internal Information Security policy and procedure guidelines.
- Working with the development and legal teams, complete client security questionnaires

### **Requirements**

- BS in Computer Engineering, Industrial Engineering, Mathematic Engineering or related fields
- 3+ years of experience in IT related roles
- Knowledge and experience in Security Devices such as Firewall, VPN, IPS/IDS, WAF, Proxy, SIEM
- Knowledge of information security principles, including, cyber security, data privacy, data protection, threat and vulnerability management, incident response, identity and access management, risk assessment/management, cloud security concepts and standards compliance (ISO 27001, PCI-DSS, GDPR, KVKK requirements)
- Experience implementing controls for information security compliance programs including PCI, ISO 27001, and SOC 2
- Experience with all aspects of the penetration testing process including web, mobile applications, and network. Hands on operational experience with penetration testing tools including the ability to deploy, configure, and run these tools.
- Experience with social engineering: phishing, vishing and physical testing.
- Build & execute IS security processes, RACIs, KPIs, procedures, guidelines and ensure relative awareness of all involved stakeholders.
- Establish mechanisms, conduct assessments to identify IT Risks and compliance issues; develop, and recommends corrective action plans for resolution.
- Responsible to ensure IT and data compliance and practices are considered in projects, initiatives, new implementations and operational tasks.
- Strong communication skills in English, both written and verbal

### **Personal Qualities**

- Highly motivated, takes initiative.
- Excellent communications and analytical skills.
- Eagerness on self-improvement, open-minded, career-oriented
- Ability to work alone without much supervision.
- Persistent and resilient; tenacious when encountering obstacles.
- High degree of self-confidence.
- Thrives in a fast-paced collaborative environment.
- Flexible attitude and ability to adapt to changing priorities.
- Demonstrates strong organizational, planning and personal time management skills.
