

POPULATION HEALTH MANAGEMENT OFFICES

An AultCare Population Health Management (PHM) office delivers better quality and cost savings. The AultCare PHM team meets regularly with each PHM physician to review data analytics and to identify opportunities to provide coordinated, member-centered care. A PHM office has an AultCare nurse to coordinate care between the member, physician, and health plan. Members of a PHM office will experience increased access to care, as well as care that is coordinated and comprehensive, which results in better health outcomes.

The National Committee for Quality Assurance (NCQA) has developed the Healthcare Effectiveness Data and Information Set (HEDIS) as a comprehensive set of standardized performance measures. AultCare used these standards to adequately measure how our quality of care compares.
