

# FinTech regulation for banks

Between a rock and a hard place?

Dr. Alexander Glos, 21 May 2019

Freshfields Bruckhaus Deringer

# Agenda

---

1. Regulatory pressure on Bank IT
2. Regulatory barriers for the use of (third party) IT
3. Regulatory barriers for the investment in crypto-assets
4. Regulatory treatment of new competitors
5. Regulatory incentives for investing in software

# Regulatory pressure on Bank IT

# Regulatory pressure on Bank IT

## Legal framework

### Article 74 of CRD IV (2013/36/EU) - Robust governance arrangements

Requirement to establish:

- Clear organisational structure
- Well-defined, transparent and consistent lines of responsibility
- Effective processes

In order to:

- identify
  - manage
  - monitor
  - report
- risks the bank is exposed to

Information and Communication Technology (ICT) risks, including cyber incidents, to be managed within existing risk management frameworks, incl. crisis management and business continuity – not an isolated IT concern, but holistic bank approach.

# Regulatory pressure on Bank IT

Legal framework

Basel Committee on Banking Supervision's Standard number 239 (2013) sets out IT-requirements regarding data aggregation and risk reporting:

Fast  
availability of  
information to  
allow quick  
decisions

Strong IT-  
Infrastructure

Support data  
aggregation  
and risk  
reporting

# Regulatory pressure on Bank IT

## SSM activities

Requirement for a CIO	SSM focus areas of supervision building on current key drivers of banking sector risks, including cybercrime and IT disruptions:	
<ul style="list-style-type: none"><li>- Clear responsibilities</li><li>- Knowledge of ICT risks</li><li>- Adequate access to management body to ensure proper reporting</li></ul>	On-site inspections on IT risk	Cyber incident reporting: <ul style="list-style-type: none"><li>- Collect information on cyber incidents impacting banks</li><li>- Facilitate fast supervisor reaction in the event of a major incident affecting one or more banks</li></ul>

# Regulatory pressure on Bank IT

---

## Regulatory development

Joint Advice of the European Supervisory Authorities identified threats to cyber security:

- Potential impact of cyber-attacks increases
- Frequency of cyber-attacks increases

This leads to:

- Danger to consumer and market trust
- Threat to financial stability

# Regulatory pressure on Bank IT

---

## Regulatory development

ESA propose new legislative and delegated acts to improve operative resilience in the banking sector:

- Contingency plans
- Business continuity plan
- Aim is to continue services without disruption
- Changes to CRD and PSD2
- Specially address the concentration risk regarding outsourcing to cloud-outsourcing providers

# Regulatory barriers for the use of (third party) IT

# Regulatory barriers for the use of (third party) IT

---

## Outsourcing and Cloud-outsourcing

EBA Guidelines on outsourcing arrangements:

- Outsourcing does not delegate responsibility
- No lower suitability requirements – competent management still needed within the undertaking
- Institutions shall maintain sufficient substance
- The outsourcing of critical or important functions is to be met with special attention

# Regulatory barriers for the use of (third party) IT

Outsourcing and Cloud-outsourcing

EBA Guidelines distinguish between different functions being outsourced:

General Rules – applies to all functions

Rules applying to critical or important  
functions

# Regulatory barriers for the use of (third party) IT

---

## Outsourcing and Cloud-outsourcing

General requirements set out in the EBA Guidelines:

- Define Outsourcing Policy as a framework and monitor outsourcing on an oversight basis regarding concentration risk
- Management regarding conflicts of interest
- Internal audit plan and program to monitor individual outsourced functions
- Outsourcing register including all outsourced functions
- Due Diligence and assessment before outsourcing services
- Special requirements regarding the outsourcing agreement

# Regulatory barriers for the use of (third party) IT

---

## Outsourcing and Cloud-outsourcing

Special requirements set out in the EBA Guidelines with regards to critical or important functions:

- Business continuity plan to prevent a disruptions in case of failure or even insolvency by provider of outsourced services
- Restrictions to sub-outsourcing
- Inform competent authority

# Regulatory barriers for the use of (third party) IT

## Cloud-outsourcing

Specific aspects for cloud-outsourcing:

- Data protection is more important – increasing threats due to global distribution of data
- Business continuity plan and contingency plan need to reflect information security standards
- Concentration risk has to be considered, as the market for cloud-outsourcing-services is dominated by few providers

# Regulatory barriers for the investment in crypto-assets

# Regulatory barriers for the investment in crypto-assets

What are crypto-assets?

Crypto-assets are digital assets, that use strong cryptography and work on a distributed ledger technology (usually block chain).

There is no common taxonomy of crypto-assets.

Payment/Exchange/ Currency Tokens	Investment Tokens	Utility Tokens
May partially substitute classic currencies.	Provide rights for investment purposes	Access to a product or service

There is no regulatory framework for the treatment of crypto-assets in the EU.

# Regulatory barriers for the investment in crypto-assets

---

## Investment in crypto-assets

Points to consider:

- Market participants' requirement for a licence to issue, broker, trade and advise on crypto-assets
- Applicability of other financial market rules (prospectus requirement, market abuse, custody, ...)
- Possibility to invest in crypto-assets for regulated entities
  - Basel Framework does not set out criteria for the exposure to crypto-assets
  - Treatment for "other assets" applies with minimum requirements

# Regulatory barriers for the investment in crypto-assets

---

## Investment in crypto-assets

- BCBS Statement on crypto-assets:
  - Due Diligence: conduct comprehensive analyses and maintain relevant expertise
  - Governance and risk management: risk management for crypto-assets within regular risk management. Due to the high degree of risk the senior management is expected to be involved in overseeing the risk.
  - Disclosure: publicly disclose exposure to crypto-assets
  - Supervisory Dialogue: inform authority of actual/planned crypto-asset exposure

# Regulatory barriers for the investment in crypto-assets

ECB Crypto-Assets Task Force

Crypto-assets do not fit in existing regulatory framework, as they are not:

- Electronic money (EMD2)
- Financial instrument (MiFID)
- Regulated by PSD2

“Risks [...] are limited or manageable.”

ECB Crypto-Assets Task Force, May 2019

“The sector [...] requires continuous careful monitoring since crypto-assets are dynamic and linkages with the wider financial sector may increase to more significant levels in the future. ”

ECB Crypto-Assets Task Force, May 2019

The ECB proposes to deduct crypto-assets from the Tier 1 Capital because of their high volatility. This would create an incentive to refrain from investing in crypto-assets.

# Regulatory barriers for the investment in crypto-assets

---

"I'd fire them in a second. For two reasons: It's against our rules, and they're stupid. And both are dangerous."

Jamie Dimon on BitCoin traders,  
September 2017

"It's a fraud"

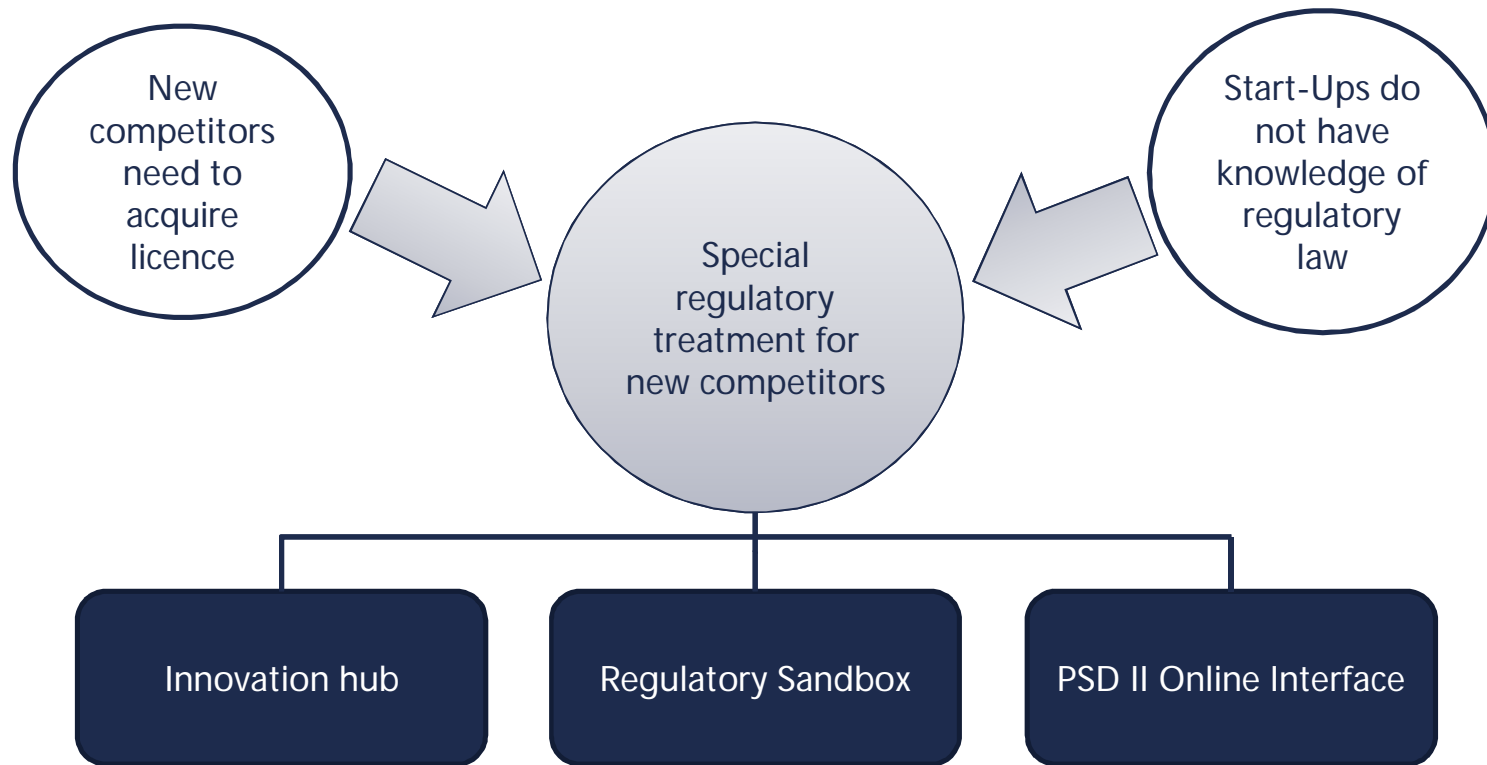

Jamie Dimon on BitCoin,  
September 2017

"Worse than tulip bulbs"

Jamie Dimon on BitCoin,  
September 2017

# Regulatory treatment of new competitors

# Regulatory treatment of new competitors

# Regulatory treatment of new competitors

---

## Innovation Hub

- In 24 EEA-States
- First established in 2014
- Majority established in 2016 and 2017
- Objective and scope vary slightly
- Tech-Experts within the authority act as a first contact point

## Regulatory Sandbox

- In 5 EEA-States
- First established in 2016
- Objective in the essence similar, but single jurisdictions have a further objective
- Test innovation (closely monitored) in the market

# Regulatory treatment of new competitors

## PSD II Online Interface

- Banks need to create online interfaces, for specific service providers
- Provide information on a payment account
- Accounts are easier accessible by user (through special service providers)
- Banks might lose direct customer-contact

# Regulatory incentives for investing in software

# Regulatory incentives for investing in software

---

- Software is a form of intangible assets
- Deduction of intangible assets from Tier 1 Capital under CRR I
- CRR II will include exemption for prudently valued software assets
- Such software-assets shall not be deducted from Tier 1 Capital

# Regulatory incentives for investing in software

IFRS (IAS 38) recognises intangible assets (software) under certain circumstances:

Separate acquisition	Internally generated
<ul style="list-style-type: none"><li>- Purchase price reflects the markets expectations</li><li>- Costs can be measured reliable through the purchase price</li></ul>	<ul style="list-style-type: none"><li>- Expected future economic benefits</li><li>- Reliable determination of the cost of the asset (including development, but no research)</li></ul>

# Regulatory incentives for investing in software

---

- Prudently valued software assets:
- This requires, that the value is not negatively affected by resolution, insolvency or liquidation of the institution
- Amortization
- Realised sales of such assets/software
  
- The EBA shall draft regulatory technical standard to specify the application of this deduction.

# Thank you
