SMART JOBSITE TECHNOLOGY

Track your equipment. Automate service and maintenance. Maximize utilization.
**Track** helps construction professionals manage their entire fleet from one dashboard on their phone, tablet or computer. Access valuable fleet data that helps you make better business decisions.

**SMART JOBSITE TECHNOLOGY**

*Stay connected to your fleet:*

- Real-time location of equipment, vehicles and materials
- Machine utilization rates to the minute
- Digital Work Orders and complete maintenance history
- Access codes and historical equipment access data
CONNECT ALL OF YOUR ASSETS.
Manage your mixed fleet and access all your asset data from one single dashboard on any internet-connected device—no matter the OEM. Ditch the one-size-fits-all approach to equipment tracking, and use Track across your fleet, on vehicles, attachments, small tools and heavy equipment.

See all the fleet data you need:

- Engine status and run time of connected machines
- Location of every asset, from dozers to drills
- Status of every Digital Work Order across your fleet
- Detailed reports on utilization, trips, Geofences and more
Set **Custom Alerts** so you know exactly where your assets are, who is using them and when. Track monitors engine health, fuel levels and more to keep you informed of your fleet status and health. These alerts allow your team to stay on top of what matters most.

---

**Stay Informed**

- Every time your machine enters or exits a Geofence
- Push alerts on fuel levels and engine health
- Idling time and status
- Driver speeding
- DEF and Regen state
- Custom alerts for all engine data, no matter the OEM
Fuel levels and engine health

Idling time and status

DEF and Regen state

Enters or exits a Geofence
Digital Work Orders simplify and streamline maintenance for your entire team, eliminating unnecessary service delays and paper trails of work orders. Digital Work Orders create a historical service record for every machine in your fleet. This helps your team stay proactive and save money: Reactive maintenance costs 3-4x as much as preventative maintenance costs.

See your fleet’s complete service history in one dashboard:

- Reduce diagnostic time by 95%
- Predict machine failure based on historical performance
- Identify recurring issues across your fleet
- Reduce parts and service spend by up to 50%
Prevent theft and unauthorized machine use with EquipmentShare’s **Sentry Keypad**. Ditch the universal key; instead, provide authorized operators with unique access codes to start machines. **Sentry Keypad** locks down machines, locks out thieves and untrained operators and communicates with Track to alert you of any attempts to operate an asset.

**SENTRY KEYPAD**

Receive alerts for Keypad activity:

- Unauthorized access attempts
- Authorized user logs on and starts machine
- Multiple access attempts made
- Successful lockdown is initiated
TAG SMALL TOOLS & ATTACHMENTS

With Tags, you can keep track of your small tools and attachments on the jobsite. Track-equipped assets pick up Bluetooth signals from Tagged implements so you can quickly find them on the jobsite. Save money on replacements by installing Tags on your tools, implements and attachments.
Tags help easily locate small tools and attachments on Track-connected jobsites.
Track collects critical engine data from your machines and turns it into actionable knowledge with robust utilization reports. Get a complete breakdown of how every asset operates with reports on its complete history: run time, fuel use, locations and maintenance. Reports offer a comprehensive look at more than just machine health.

**FLEET UTILIZATION REPORTS**

Stay informed on the status of every asset in your fleet:

- Quickly see hours machines ran on any jobsite
- Locate and replace Tags with low batteries
- Detailed mileage and fuel reports make IFTA compliance easy
- Build custom reports for the insights you want
**Track** collects the Hours of Service (HOS) and Records of Duty Status (RODS) data the FMCSA requires. Then, drivers can access E-logs from Track or from the Contractors E-logs app on their mobile device and confidently provide accurate, real-time HOS, RODS and DVIR information to law enforcement.

---

**ELD-COMPLIANT SOLUTION**

Adapt to new ELD laws easily with Track:

- Collect HOS and RODS data automatically
- E-logs app prevents fines and violations with real-time mobile access
- Retain robust driver logs and historical ELD data
Drivers get on-the-road access with the E-logs app.
Track goes everywhere you go with Link, the mobile app. Log into Track on your cell phone with Link, available in the App Store and on Google Play. Link gives you access to the most important Track features for on-the-go updates on your fleet.

**Get equipment updates on your phone:**

- Locate Track-equipped assets in Map view
- Create and update Digital Work Orders in the field
- Easily track hours worked with Time Tracking
Find your fleet in seconds from your connected mobile device.

Create, update and track the progress of every Digital Work Order.
