

# Installation of ArkiveBox scopes

Log in to **Google Workspace** Admin Console and follow these steps:

## (1) Select the **Security** icon

## (2) Select App Access Control

The screenshot shows the Google Admin console interface. At the top, there is a blue header with the Google Admin logo, a search bar, and user profile icons. Below the header, the 'Security' section is active, indicated by a shield icon and the word 'Security' in a box on the left. The main content area lists several security settings, each with a dropdown arrow on the right:

- Context-Aware Access**: Use device and user identification to manage access levels and enforce access policies for G Suite applications.
- Google session control**: Set session duration for Google core and additional services, such as Gmail and Docs. Below this, it shows 'Session control' with a purple icon, 'Web session duration: 30 days', and 'Applied at 'gedu.demo.esource.mx''.
- Google Cloud session control (Beta)**: Set session duration for Google Cloud Platform console and Google Cloud SDK.
- Advanced settings**: Manage advanced security features such as authentication, and integrating G Suite with internal services.
- App access control**: Manage OAuth access for third party apps. This item is highlighted with an orange arrow pointing to it from the left.

### (3) Select Domain wide delegation

The screenshot shows the Google Admin console interface for API Controls. The top navigation bar includes the Google Admin logo, a search bar, and user profile icons. The breadcrumb trail indicates the path: Security > API Controls. On the left, a sidebar contains the title 'API controls' and a descriptive paragraph: 'Use these controls to enable or restrict access to G Suite APIs for customer-owned and third-party applications and service accounts. Reduce the risk associated with third-party access to G Suite APIs by limiting access to only trusted apps.' The main content area is divided into two sections. The 'Overview' section displays statistics: '0 restricted Google services' and '15 unrestricted Google services', with links for 'MANAGE GOOGLE SERVICES'. It also shows '0 third-party apps configured' with a link for 'MANAGE THIRD-PARTY APP ACCESS'. The 'Settings' section includes a toggle for 'Show this message if a user tries to use an app that can't access restricted Google services', a text input field for a 'Message (300 characters limit)', and a checked checkbox for 'Trust internal, domain-owned apps'. Below this, a note states: 'Apps you trust on the G Suite Marketplace, Android, or iOS whitelist are automatically trusted on your App access control list.' At the bottom of the settings area are 'CANCEL' and 'SAVE' buttons. A separate section titled 'Domain wide delegation' is highlighted with an orange arrow. It contains the text: 'Developers can register their web applications and other API clients with Google to enable access to data in Google services like Gmail. You can authorize these registered clients to access your user data without your users having to individually give consent or their passwords. Learn more' and a link for 'MANAGE DOMAIN WIDE DELEGATION' with a mouse cursor hovering over it.
