

FINES FROM PRE-TREATED DEMOLITION WASTE TO SILO

The 80 meter conveying system delivered by PST transports fine residues from commercial, and industrial waste. The material includes sand, pebbles, plastic, and wood which is conveyed to a storage silo.

The system includes 4 different conveyors of type U-550, where of the 29 meter one is the longest.

By using encapsulated conveyors, our Finnish client can utilize the advantages of less spillage, less manpower and less maintenance costs.
