# Paladin Shield

INBOX PROTECTION

More than 90% of successful cyber attacks start with an email. To effectively prevent ransomware, phishing, and social engineering, you must start with the inbox. Email providers offer base level security features, but the rise of cyber crime against small businesses is proof positive of the need for more.

The Market Standard

Included security features of common providers like GMail and Outlook focus on attachment scanning. This effort is admirable, but falls short on the browser based attacks and social engineering schemes comprising the vast majority of cyber attacks against small businesses today.

Paladin's Advantage

- Real-time scanning requires no storing or retention of email content, minimizing privacy concerns.
- AI powered language analysis allows Shield to guard against growing social engineering threats, such as fraudulent wire instructions.
- Email provider security focuses on attachment scanning, while Shield highlights the more common attack methods characterized by malicious language and links.
- No filter will ever be perfect. Shield's training platform will turn your employees into another line of defense.
- Our included phishing simulation program will give users an opportunity to make harmless mistakes, further reinforcing your human firewall.
- Insightful reporting on threats blocked and risky user behavior allows for informed decision making and efficient use of resources.

Review this message carefully.
We identified bank account info and a sense of urgency

Hi Jane,

We had a last minute change on our bank account due to an issue. Can you cancel the last check and instead send payment to our new account?

Bank: FirstCaribbean International Bank
Account: **021000021**
Routing: **11401533091000019**

If ou could please expedite this payment, that would be wonderful. Ray promised me that you guys would be able to get it same day.

Thanks for your help,

Jacob Levi

Paladin Shield was built and is constantly maintained by experts whose goal is to make effective cybersecurity simple for small businesses. To learn more go to meetpaladin.com or reach out to us at contact@meetpaladin.com
