

Rescind Public Notice

The City of Burkburnett is officially rescinding the previous public notice issued on June 10th for nitrate levels exceeding regulatory standards. TCEQ (Texas Commission on Environmental Quality) recorded a reading of 10.9 mg/L, which exceeded the limit of 10 mg/L. Upon notification on June 10th, the City took an additional sample resulting in 3.85 mg/L, which has been approved by TCEQ. The City is in full compliance with state and federal regulations regarding nitrate standards.

We thank our citizens for their patience during this process and apologize for any inconvenience or hardships this incident may have created while the City worked diligently with TCEQ to resolve the matter. As always, we are dedicated to observing all state and federal guidelines to ensure the utmost quality of our community's drinking water resource and to maintain clean, safe drinking water not only today but for the future needs of the City of Burkburnett.

If you have questions regarding this matter, you may contact Mike Whaley, Director of Public Works at 940-569-2263.
