Project Title	University Hospital in East London
Value	£14,500.00
Programme Duration	2 Weeks
Nature	Asbestos Removal
Client	Ayerst Environmental Ltd

About The Project

An asbestos survey carried out by the clients retained asbestos consultants identified widespread contamination throughout a roof space. The contamination emanated from pipe lagging that had deteriorated over time. The roof void was located directly above an operational hospital environment that meant extreme care had to be taken not to breach the ceiling below. Working carefully off of staging boards Decontaminate removed all contaminated materials including fibreglass insulation from throughout the roof void.

Materials removed:

- Asbestos pipe insulation
- Asbestos debris
- Contaminated insulation

Project Challenges

- Working within a live hospital
- Working above an operational hospital environment
- Removal of waste through an occupied hospital
- Confined space working
