

# Redistributing Med Team Patients

**Step 1:** Calculate Total Number of Med Team Patients on All 4 teams (excluding ICU and CCU patients).

**Step 2:** Select the appropriate "Volume Tier" as listed below

**Step 3:** If "Post Admit" team is over their goal number, distribute patients to other teams

- Emphasis on the teams farthest from goal number
- If multiple teams are not at goal, distribute patients among those teams in a "round robin" format

## < 33 patients total

Post Admit Team: 12  
Day 2 after admit: 8  
Pre-admit day: 7  
Admitting Day: 5

## 34-40 patients total

Post Admit Team: 14  
Day 2 after admit: 11  
Pre-admit day: 9  
Admitting Day: 6

## 41+ patients total

Post Admit Team: 16  
Day 2 after admit: 12  
Pre-admit day: 10  
Admitting Day: 7

If all teams are at goal, add patients to each team in a round robin format.

### Prioritize Distribution

1. Re-admission (Bounce Backs) from a specific med team within the calendar month (not required)
2. Overnight Admits (specifically those not seen by attending yet).
