

Verodin Job Posting – Lab Manager, Engineering

Who We Are

Verodin is reshaping how organizations measure, manage and improve cyber security effectiveness. Evangelizing a technology movement takes more than just a good sales pitch. As a team, we obsess over helping our customers:

- Assess their current state and expose true security gaps
- Establish a means to measure security effectiveness and demonstrate improvement over time
- Realize the maximum potential of existing security investments
- Raise the bar for the entire security organization

If you're passionate about security, have the core competencies outlined below and are looking to join a team on a mission, Verodin is the place for you.

The Team and The Role

The Verodin Engineering and Development team is at the core of bringing cutting edge technology to our customers with the Verodin Security Instrumentation Platform. Come be part of a fast-paced team that focuses on delivering solutions to the hardest problems in Information Security. The Engineering and Development team tackles a constantly evolving set of new challenges in a new market that we are defining.

The Verodin Team is currently seeking a Lab Manager to join the Engineering team at Verodin Headquarters in Virginia. Do you automate everything? Does the concept of doing the same task more than once grind away at you? Are details what you live for? If so, we are looking for a Lab Manager to charge forward with our many environments and scale for the future.

Job responsibilities include:

- Maintaining and updating Development, QA and Threat Research lab environments
- Virtual and Cloud infrastructure operations
- Network configuration and operations

- Work with the team in identifying and overcoming challenges deploying across multiple network types and operating systems

Required qualifications include:

- Strong background in Linux Administration
- Strong networking background, with hands-on troubleshooting ability and experience with Cisco, Arista, Juniper or similar equipment
- Significant experience with VMware Virtual Infrastructure, including virtual networking
- Experience with configuration and management of information security offerings, including SIEMs, firewalls and endpoint security technologies
- Experience with configuration management (Ansible, Puppet, Chef or similar)
- Experience with a scripting language (Python or Ruby preferred)

Desired qualifications include:

- Administration experience with Enterprise Windows Environments
- Significant experience with Azure or GCP
- Experience with container orchestration
- Strong ability to “think on your feet”

To apply for this role, please send your CV/resume and a detailed cover letter describing why you’re a fit to careers@verodin.com.

Verodin is an equal-opportunity employer.
