

# Verodin Job Posting – User Experience Designer, Engineering

## Who We Are

Verodin is reshaping how organizations measure, manage and improve cyber security effectiveness. Evangelizing a technology movement takes more than just a good sales pitch. As a team, we obsess over helping our customers:

- Assess their current state and expose true security gaps
- Establish a means to measure security effectiveness and demonstrate improvement over time
- Realize the maximum potential of existing security investments
- Raise the bar for the entire security organization

If you're passionate about security, have the core competencies outlined below and are looking to join a team on a mission, Verodin is the place for you.

## The Team and The Role

The Verodin Engineering and Development team is at the core of bringing cutting edge technology to our customers with the Verodin Security Instrumentation Platform. Come be part of a fast-paced team that focuses on delivering solutions to the hardest problems in Information Security. The Engineering and Development team tackles a constantly evolving set of new challenges in a new market that we are defining.

The Verodin Team is currently seeking a User Experience Designer to join the team at Verodin Headquarters in Virginia. Do you obsess over making the complex simple? Does finding out why the “things that matter” fascinate you? Are details what you live for? If so, we are looking for a seasoned professional to take many of the market-defining experiences in the Security Instrumentation Platform into the future.

Job responsibilities include:

- Ideation and iteration on the user experience across the Verodin platform.
- Coordinate and conduct user research and testing. Directly interact with customers and users to improve usability.
- Collaborate closely with product managers and engineers to establish requirements and understand platform capabilities.
- Creation of a comprehensive information architecture and style methods.
- Hands-on design and development of wireframes, mockups and rapid prototypes with a high level of polish.
- Effective and articulate presentation of design rationale to key stakeholders.

Required qualifications include:

- 3+ years of experience with applied user experience or interaction design.
- A pixel-perfect portfolio that establishes a history of designs with a positive impact.
- Excellent communication skills and Impeccable attention to detail.
- Ability to be part of a highly collaborative, ego-free team.
- Experience in designing for implementation in React, jQuery and native JavaScript.

Desired qualifications include:

- Significant information design skills with a foundation in user experience heuristics.
- Design of in-product telemetry that plays a role in improving product user experience.
- The ability to know when you're right *and* when you're wrong – as well as how to tactfully share those insights, improving the team.
- Strong ability to “think on your feet.”

To apply for this role, please send your CV/resume and a detailed cover letter describing why you're a fit to [careers@verodin.com](mailto:careers@verodin.com).
