GAIN ASSURANCE YOU WON’T BE NEXT.

Combine threat intelligence with Verodin to continuously test IT defenses against your potential adversaries and their attacks.

TURN INSIGHT INTO ACTION

Combine the latest threat intelligence from our partners with the Verodin platform to automatically test defenses against ever-evolving threat actor behaviors, visualize results, and enable your business to achieve optimum protection.

THREAT INTELLIGENCE ≠ SECURITY EFFECTIVENESS

Knowing the possible threats against your organization doesn’t ensure your defenses can protect you. Improve your approach by turning your intelligence into empirical data on how your systems will react to the known behaviors used in attacks.

HOW IT WORKS

• Add Threat Actor Assurance Module to the Verodin Security Instrumentation Platform (SIP).
• Integrate one or more threat intelligence feeds from our partners.
• Information is automatically retrieved and collected by Verodin.
• Consolidated profiles are created for each Threat Actor.
• Tactics, techniques, and procedures are mapped to the Mitre Attack Framework and Verodin Evaluations are created automatically.
• Security defenses are tested with the same behaviors used by your adversaries.
• Gain an accurate understanding of how your defenses will perform and which threat actor groups could compromise your business.

Visualize the Ability of Your Security Defenses to Protect Against Your Adversaries
**BENEFITS**

**OPTIMIZE PROTECTION AND REDUCE YOUR BUSINESS RISKS FROM KNOWN THREAT ACTORS AND THEIR LATEST ATTACKS**

Go faster by seamlessly acquiring the latest threat intelligence from your providers and automatically testing your defenses with the same behaviors your potential adversaries use to breach other companies.

**VALIDATE DEFENSES AND GAIN ASSURANCE YOUR CRITICAL BUSINESS ASSETS ARE PROTECTED**

Consistently and continuously test your security defenses to determine your ability to detect, block, and alert based on the attack behaviors. Definitively determine security effectiveness against the known adversaries.

**CONFIDENTLY REPORT ON THE EFFECTIVENESS OF YOUR SECURITY PROGRAM TO THE REST OF THE ORGANIZATION**

Visualize how defenses are performing and gain insight into the effectiveness of your technology, people, and processes in defending your organization.

**VERODIN SECURITY INSTRUMENTATION PLATFORM**

Verodin SIP empowers everyone involved in the cybersecurity lifecycle to measurably improve and demonstrate the value of their defenses across people, process, and technology.

**THREAT ACTOR ASSURANCE MODULE**

Combine the latest threat intelligence with Verodin to gain an accurate understanding of how your defenses will respond if attacked by the known threat actors.
