

### **Declaration of content**

- » Finely and coarsely ground residue (slag) from smelters, at present Vargön Alloys AB. Processed in the company's own mills and screens to maximise the Puzzolan properties.
- » Microsilica from Elkem.

### **Fact**

The EU's chemical regulatory body REACH carried out a registration of alloys and slags in 2010, in conjunction with that the slag was approved as a construction material. Since REACH's decision, ferrochrome slag has been sold to external customers.
