

Opticca is a hybrid, multi-cloud service provider that accelerates IT transformation for hundreds of growing and established brands. Through our deep technical knowledge, strategic relationships with the world's leading cloud hyperscalers, proven delivery methodologies, and highly specialized experts, we provide the capabilities and practical guidance customers need to successfully embrace IT change and move their businesses forward.

CASE STUDY | 4POINT SOLUTIONS

4Point Solutions Creates Azure Landing Zone to Support Cloud Adoption at Scale

4Point turned to Opticca to deliver an Azure landing zone and migrate production & development workloads, providing repeatable environments to meet the deployment & operations needs of their growing cloud portfolio.

Background: Four Point Solutions Ltd. (4Point) is an Adobe Gold Solution Partner focused on system integration, solution development, digital marketing and technical support services. 4Point delivers innovative end-to-end applications.

Challenges: 4Point had several drivers—reduce operational and business continuity risks associated with a data center with aging hardware and unsupported 3rd party software. Shifting to the cloud enables 4Point to increase team agility in supporting and growing its customer base as an Adobe Gold Solution Partner.

RISKS

Motives: The new landing zone enables a hybrid architecture for production and non-production environments that supports the migration of workloads for development, sales, administration, and functions currently hosted in 4Point's on-premise data center. The architecture allows 4Point to operate in a transition state until all on-prem services have been migrated and decommissioned. Opticca also provides various automation processes, documentation & knowledge sharing support to transition operations of the environment to 4Point and to complete future migration activities.

Benefits:

- Azure implementation following Microsoft Cloud Adoption Framework best practices, incl application of various Security best practices
- Internal Marketplace for VM images allowing self-service provisioning for development team
- Contributor to enriching 4Point team professional development on cloud and DevOps technologies and best practices

Azure Landing Zone

Solution

Multisubscription Azure environment that accounts for scale, security governance, networking, and identity.

Features

- enables application migration, modernization, and innovation at enterprise-scale in Azure
- provides a stable place for your workloads to run and a framework to scale
- increased speed, increased scalability, better security and performance
- faster, more secure, more efficient cloud migration journey
