

You've deployed antivirus software and a firewall
and you think you're protected from ransomware?

Think Again!

60% of small and medium businesses in the U.S.
get hacked despite having protections in place.

Introducing Cigent for Networks:

The only managed network security solution designed exclusively for small and medium businesses!

The threat is real—and it's lethal

- Globally, hackers are co-opting technologies designed to thwart them
- Two-thirds of data breaches go undetected for months or longer
- Malware infections continue to grow, leading to increasingly effective ransomware attacks that target organizations just like yours!

Network cyber defense for all businesses

- Completely affordable, rapidly deployable, effective network-wide cyber protection, cloud-managed for you by Cigent 24/7/365
- No training, hidden support costs or dedicated personnel required. Our experts watch your network while you run your business
- Designed for small and medium business from the ground up, verses overly complex *Fortune 500* solutions repackaged for small business
- Less than half the price of competing solutions without the management headache

Stops cyber threats on your network

- Closely monitors all Internet traffic using a low-cost, but powerful, plug and play network sensor
- Automatically detects and blocks threats in real time, preventing breaches before they happen
- Seamlessly integrates with any current cybersecurity protections

Neutralizes the enemy

- Real-time threat intelligence data from public, private and government sources
- Cigent's Threat Relevance Engine (CTRE) ranks and categorizes threats
- On-premise sensor blocks detected threats in real time
- Deception Engine provides "honeypots" to lure attackers and block them in real time
- Every packet is inspected for threats, which are blocked in real time
- Advanced data analytics detect and block threats without the reliance on signatures

ROI in less than 3 months

- The probability that an organization will experience a breach of greater than 1,000 records in any given year is 14% with estimated financial damage of \$ 1.9M⁽¹⁾
- C4N reduces that risk by as much as 80% and promotes rapid detection and remediation when something goes wrong⁽²⁾

Try Before You Buy

- Low-cost threat assessment available, based on C4N, with 100% of assessment fee applicable towards managed service agreement
