

HOW TO MAKE A FINGERSAUR

Imagine your finger as the long neck of a plant-eating dinosaur! Make the frill and turn it into a triceratops. Put one on each finger and have a whole dinosaur family.

**TRICERATOPS MEANS
THREE-HORNED FACE.**

YOU'LL NEED:

For the dinosaur:
face paints.

For the triceratops:
paper, tracing paper,
masking tape, scissors,
pencil, paints and
brushes or crayons,
sticky tape.

DINOSAUR

1 Paint your hand and a little face on your index finger.

2 With your thumb and middle finger as the legs, pull your sleeve down and let your dinosaur go for a walk.

TRICERATOPS

FRILL

1 Copy the templates on to paper (see inside front cover for instructions).

2 Cut out. Folding them in half first makes this easier. Colour them in (see page 23).

3 Cut the slits in the horns as shown. Put sticky tape on the back first to stop them tearing. Slot one into the other.

4 Put the frill on first, then the horns. Paint an extra horn on your finger face to make a 'tri' ceratops.
