

MISSION STATEMENT

At My Midland Dentist we strive for excellence in safety and quality. For this we look to:

- Become early adopters of practice accreditation.
- Infection control is paramount. To protect our patients and ourselves we keep to high standards as advised by the Australian Dental Association.
- Single use instruments are used where possible.
- We disinfect and autoclave (sterilise) all multiple use dental instruments and track all critical instruments. This sterilisation process destroys all microorganisms by applying extreme temperature and pressure for the appropriate period of time. We also follow an in-house validation protocol on our autoclaves in addition to that done by our maintenance technicians.
- Follow regulations of Hand Hygiene Australia in the use of hand washing and hand rub procedures.
- Use of Personal Protective Equipment including masks, gloves, gowns and protective glasses.
- Radiation gown is present if requested.
- Regular services, maintenance and reviews are conducted for all equipment.
- Equipment testing is compliant with national guidelines.
- Maintenance and accountability of all cleaning task recorded on a cleaning register.
- Safety and quality risk assessment reviews/audits are regularly conducted.
- Continued professional development of staff to keep abreast with new products, techniques and technologies.
- Regular reviews/audits of policies and procedures based on peer reviewed scientific evidence and regular re entering of any guideline changes.
- Feedback from our patients regularly reviewed.
