MDClone, Developer of First Healthcare Synthetic Data Engine, Raises $26 Million

aMoon Leads New Investment Round with Participation from OrbiMed and Lightspeed Venture Partners

Beer-Sheva, Israel, August 22, 2019 – MDClone announced today the closing of a $26 million Series B funding round led by health-tech venture capital fund **aMoon**, with additional funding from existing investors **OrbiMed Israel Partners** and **Lightspeed Venture Partners**. MDClone has built the first of its kind platform which democratizes data to the entire healthcare ecosystem, enabling on-demand and self-service access to healthcare data without IT mediators and, using synthetic data, without risk to patient privacy.

MDClone's platform addresses the myriad of problems accessing healthcare data for operations and quality improvement, research or innovation. Chief among them are protecting patient privacy, navigating complex data and IT systems. "Every moment of every day there is a missed opportunity to use data to improve healthcare. MDClone's solution unlocks data and with the newly added power of aMoon and continued support from OrbiMed and Lightspeed, we can turn data into a real strategic asset to transform care around the world," said Ziv Ofek, founder & CEO of MDClone and previously the founder of dbMotion, which was acquired by Allscripts.

With the new funding, MDClone will further develop its existing platform and build new products and novel approaches leveraging data across its global network, as well as accelerate sales and marketing efforts. MDClone was founded in 2016 in Israel, and has since expanded to the U.S. where its current clients include Washington University School of Medicine in St. Louis, Intermountain Healthcare and the Regenstrief Institute. Israeli clients include Rambam Health Care Campus, Sheba Medical Center, Tel-Aviv Sourasky Medical Center, Maccabi Healthcare Services, Clalit Healthcare Services and Assuta Medical Center.

At the core of MDClone's platform is a healthcare-oriented data lake and discovery tool which, together with MDClone's patented Synthetic Data Engine, provides a rapid and safe self-service environment for caregivers and researchers to understand any element of the care path for any population of interest. This breakthrough in speed to data and insights, while fully protecting patient privacy, has opened new opportunities for collaboration and the development of new services, technologies and treatments by MDClone clients.

"MDClone is resolving one of the greatest challenges in this emerging era of health-tech: centralizing, optimizing and enabling quick and easy access to health data, while preserving privacy and compliance," said Yair Schindel, MD, Co-Founder and Managing Partner of aMoon. "We are honored to partner with Ziv Ofek and his outstanding team who will upgrade healthcare for millions globally."

######

About MDClone
MDClone (www.MDClone.com) introduces the world's first Healthcare Data Sandbox, finally putting data in the hands of those who can use it to transform care. Powered by MDClone's Synthetic Data Engine and Longitudinal Database, the Sandbox eliminates privacy concerns and data limitations to improve quality, empower research and drive innovation. The Healthcare Data Sandbox has been deployed worldwide in health systems, HMOs, pharma companies and research institutes.
