For Today's Equine World

THE RIGHT TRAILER TO MATCH YOUR **LIFESTYLE**

You're going to love your new Logan Coach. The newest line of Logan Coach trailers are better than ever—featuring cleaner lines, smarter styling, advanced engineering and more standard features than any trailer around...all for less. And, at Logan Coach, SIZE DOES MATTER, with longer stalls for more comfortable travel. You owe it to yourself to come and see everything Logan Coach has to offer.

WHAT DEFINES A LOGAN COACH

— WHIZ PROOF FLOORING (Patent Pending)

Whiz Proof slatted aluminum floor with Vortex spray rubber coating - heavy extruded aluminum plank floor is stronger than the flat aluminum sheets used by the competition and, just as important, it drains! In addition, Vortex spray rubber is adhered to the plank floor, which seals out moisture, making the Whiz Proof outlast any other type of aluminum floor. It just makes sense.

— SureGrip RUBBER FLOORING

Sure Grip/Permanent/Self-Draining Anti-Microbial Rubber Flooring. Floor mats often shift during transport, since SureGrip is adhered to the floor, it offers superior traction because it always stays put. It is easy to clean and maintain as it is seamlessly integrated to the trailer and does not need to be removed for maintenance. SureGrip compliments the Whiz Proof slatted aluminum floor by allowing moisture to drain, helping to eliminate the ammonia odors and to dry excess waste. Which can't be said of trailers built with flat aluminum sheets on the floor.

— GALVA-STRONG FRAME

Galvanized structural tubing is used exclusively in the structure, making up the rust-resistant Galva-Strong Frame found in all Logan Coach trailers.

- Galva-Strong Tubing is 18% Stronger than Black-Steel Tubing
- Galva-Strong Tubing has 50% More Strength at the Welded Joint than Aluminum
- Pound for Pound, Galva-Strong is Three Times Stronger than Aluminum
- Galva-Strong Frames Do Not Rust like Black-Steel Framed Trailers

— VORTEX RUBBER COATING

- Offers Kick Protection in the Stall Area
- Eliminates "Road Blast" on Front of GN
- Reduces Road Vibration
- Protects Against Oxidation
- Easy to Clean and Maintain
- Preserves the Good Look of Your Trailer

— 3M ADHESIVE

3M VHB (very high bond) Adhesive System is the bonding method Logan Coach has chosen to adhere the aluminum to the galvanized frame. VHB is a double-sided adhesive tape that offers 25% better adhesion than welding and other mechanical fasteners. Perhaps its biggest advantage is that it allows sheets to expand and contract in extreme temperatures. VHB tape has many other advantages, including a quieter ride, a more sleek appearance, sealing out moisture and reducing the need for unsightly mechanical fasteners.

— BIGGER STALLS (Deluxe & Ultimate Class)

Logan Coach deluxe-size stalls are the largest, non-custom stalls in the industry. Measuring 135" diagonally, each stall is large enough to promote better airflow, keeping horses more comfortable. But, perhaps the greatest advantage to these deluxe stalls is that horses of all sizes have more room to stretch in the stall, allowing them to relax and feel more at ease; thus promoting normal health functions, which is a huge benefit to horses spending considerable time in a trailer.

RIOT

The Riot has the most standard features and affordable pricing of any trailer in its class. But for those who want even more, a Riot can be custom-built with all the bells and whistles to accommodate your specific needs.
