

INFORMATION SECURITY POLICY “Security Vigilant”

It is the policy of AirStrip Technologies Inc. to comply with the requirements of ISO 27001, in order to ensure information security and the protection of all information entrusted to it as the result of operations, its interface with customers, users, employees and contractors and the work product that it creates. AirStrip’s cybersecurity is focused to protect one of the Company’s most important assets: information. Information security requires controls in order to ensure confidentiality, ensure information is available to those with proper credentials, and maintain the integrity of all data in use or archived. In order to facilitate the implementation of this policy, AirStrip will regularly evaluate and continually improve its cybersecurity controls to provide necessary security controls while maximizing information confidentiality, availability and integrity of all parties who are authorized to access and use it.
