

LLKEFT20

Electric Fryers

These electric fryers are available with capacities from 14L to 40L and are equipped with electrical panel and removable armored elements in stainless steel, for easy cleaning of the tank or the maintenance of electromechanical components.

The stainless steel tank has been specifically designed to allow residual particles to fall into a cool zone to avoid burning and to prolong oil life. The tank is moulded without any welding which allows for quick and easy cleaning.

There is also a stainless steel oil collecting bin with removable surface filter and the oil draining tap is positioned just inside the door for easy access. These machines feature an additional safety thermostat with a fixed setting of 220 degrees celsius.

Anyone who has ever used an Elframo fryer does not want another brand!
