

Theodoz

The Future of Decentralized Financial Infrastructure

Summary

Theodoz is an open source infrastructure for building the blockchain based financial system. We are creating a one-stop solution for digital assets – including token issuance, financing and post distribution management.

Our Vision

Using decentralized blockchain network to bring billions of unbanked into the global economy.

Our Mission

Blockchain has enabled global economics changes in our society with people in developing countries has access to digital assets for the first time in history. We strive to disrupt FinTech by building an accessible and scalable infrastructure that allows developers to create inclusive financial applications to serve the world's unbanked.

What is EOZ Cryptocurrency ?

EOZ is an integral part of the Theodoz infrastructure built with upgraded Ethereum network protocols. It is a fork of Ethereum occurs at predetermined block height of 7280000. While Ethereum is shifting from Proof-of-Work(POW) mining to Proof-of-Stake(POS) mechanism, we intend to maintain PoW mining mechanic to foster the growth of mining community and keeping the network decentralized .

Top Features

Programmable Assets

Converting real-world assets into digital token on blockchain for greater liquidity, data security and transparency.

ASIC Resistant

EOZ is ASIC resistant and supports normal GPU mining by architecture, which means everyone throughout the world can mine EOZ cryptocurrency.

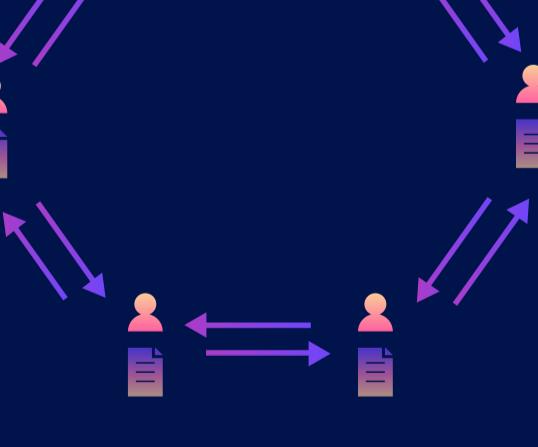

DAPP Ecosystem

Developers can build and launch decentralized applications (DAPP) on Theodoz (EOZ) network, creating unique and cutting-edge financial applications for billions of people.

Distributed Trust

No one controls the entire EOZ network, all transactions are immutable and auditable. Power and trust are shared among every EOZ cryptocurrency holders.

Roadmap

Phase 1: Roma

2019

Mainnet launch (May 2019)
Mining pool (July 2019)
Desktop wallet (August 2019)

Phase 2: Tarraco

2020

ERC-721 and ERC1400 (Q1 2020)
Hardware wallet integration (Q2 2020)

Phase 3: Turin

2021

Atomic Swap (Q1 2021)
Privacy Feature (Q3 2021)
