

Presenting at CIM May 1st 2019 in Montreal

SEATTLE, May 1st, 2019 -- CIM is the biggest mining event of the year for Canada, and DataCloud will be presenting on May 1st at 9:20am in room 513C. The presentation will include results from advanced measurements while drilling technologies on blast Hole drills at Canadian mines.

DataCloud is the **only provider of real-time, high resolution rock mass intelligence** needed to create a step-change improvement in their operating performance. With cost-effective, IoT-enabled sensors, and powerful cloud computing, Data Cloud delivers expert geoscientific evaluations of the rock throughout the mining workflow on it's user-friendly platform. The valuable subsurface insights provid significant improvements in efficiency.

Come and meet founder Thor Kallestad! He's is available for interviews before and during the conference. He can tell you more about how **Datacloud's technologies are finally making these innovations possible**, and how DataCloud has combined expertise in geosciences and mining, with the speed and scale of Silicon Valley.
