

## Data Lab

Unifying All Systems and Operations for Site-Wide Optimization

Achieve Optimal:

- ✓ Integration
- ✓ Analyzation
- ✓ Visibility

### Problem

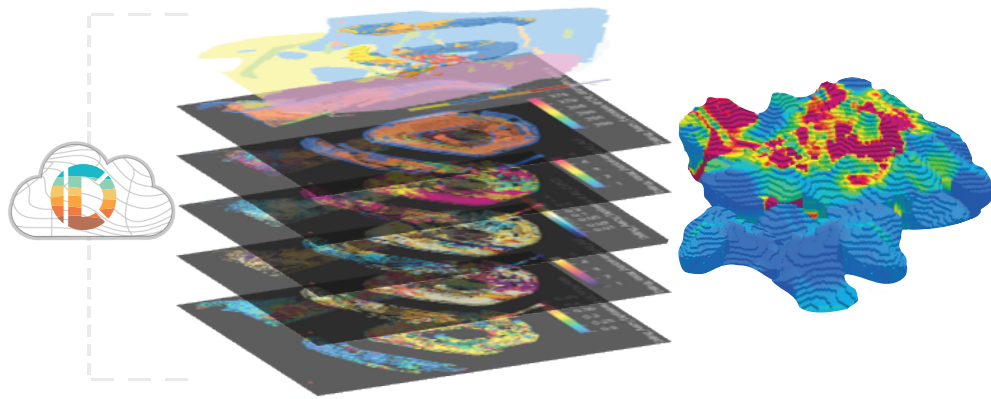

There is low transparency between departments since each crew operates independently and is measured separately.

Integrating data from different equipment systems and department software is labor-intensive and takes away from operational duties.

The volume of data that needs to be combined to align operations as a whole is overwhelming to handle.

### Solution

Data Lab is offered on our MinePortal platform. It streamlines data from different systems, departments, and software to automate integration and visualize operational metrics.

### Outcomes

- A continuous flow of new data enabling automation and analytical capabilities like never before
- More informed decision making from awareness of other department's strategies and outcomes
- A cloud-based collaboration space for all team members, onsite and remote
- Efficient access to fast answers and eliminated data redundancy

- ✓ Industry-Leading Integration Techniques
- ✓ Improved Decision Making
- ✓ Inspires Site-Wide Collaboration

## Data Lab

Unifying All Systems and Operations for Site-Wide Optimization

Achieve Optimal:

- ✓ Integration
- ✓ Analyzation
- ✓ Visibility

"We've never had this level of visibility into our operations before - it's invaluable!"

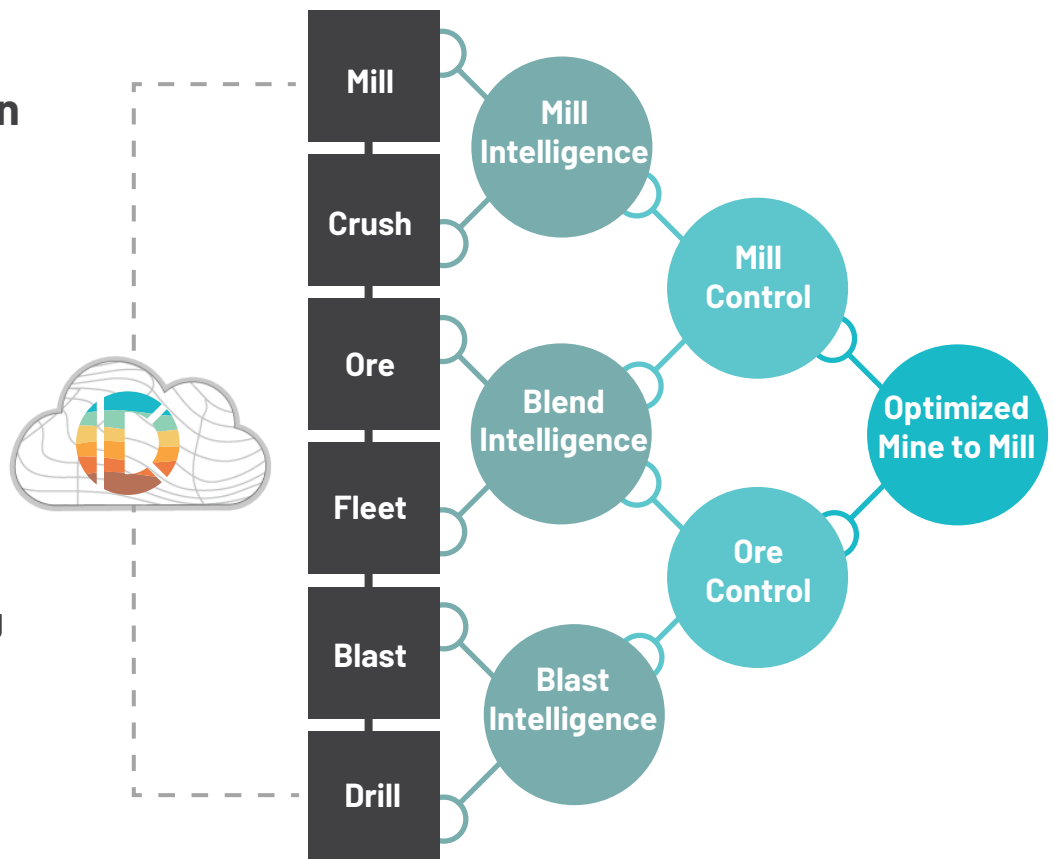

- A happy customer using the Data Lab solution on MinePortal

Data Lab is the foundation of all other solutions, including Blast Intelligence and Blend Intelligence. First, we unify data from all systems and operations, and then we visualize the data for an easy way to understand operational metrics.

## Continue Your Digital Transformation

Add our Blast Intelligence solution to optimize blasting and track its performance.

Add our Blend Intelligence solution to optimize blending and track its performance.

- ✓ Industry-Leading Integration Techniques
- ✓ Improved Decision Making
- ✓ Inspires Site-Wide Collaboration
