How does a DAO Ensure Quality Assurance?

As the crypto space continues to develop and expand, more and more users are looking for platforms to make their lives easier while also rewarding contributors for their work. ShapeShift DAO has been instrumental in this direction – unlike a traditional company, a DAO is built from the ground up to optimally serve its users while rewarding their contributions.

One of the many benefits of a DAO is the ability to remain completely community-driven – unlike a traditional company, a DAO is built from the ground up to optimally serve its users while rewarding their contributions.

The ShapeShift DAO has been extremely focused on building a community of like-minded individuals who can work together to create a better DeFi world. The ShapeShift DAO is a community of individuals who are passionate about building decentralized technologies and creating a better DeFi ecosystem.

The ShapeShift DAO has many Rooms of learning, most of which are open to the public. These rooms allow anyone to join, learn from experts, and ask questions.

Tyler responded, “EOperations is a good entry point to all the other happenings in the space. Especially with the velocity of the crypto and DeFi space, you have to realize how important it is to be part of the community and be involved as an engineer at ShapeShift Operations. One of the things that have allowed the Operations workstream to be so effective and malleable is their ability to design an evergreen tried and true process for anything, and not be hindered by bureaucracy. Because of the development of this common language, the Operations workstream is now an excellent place for people to join and start working relatively quickly. Josh stated, “It is incredibly easy for someone to come into ShapeShift’s server or visit our website, learn about the DAO and start contributing.”
