

# 05 How do I add treatment details?

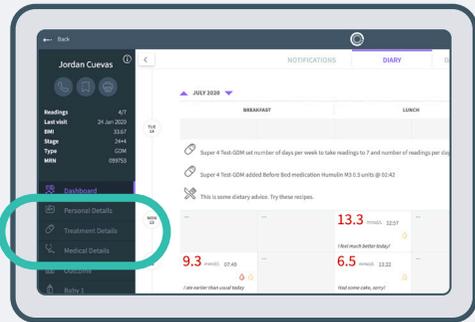

Ref: CORP-052-01

## Task: Add treatment details

**Previous actions:** Login to the GDM-Health desktop app and create a patient record

### Step 1

After logging in, select the patient by clicking on their name. Click on the **Treatment details** option from the menu on the left-hand side.

### Step 2

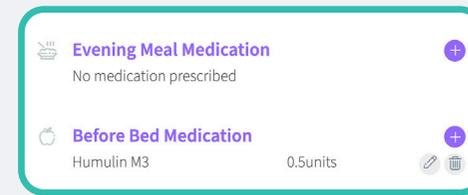

Enter the number of days per week that the patient needs to take readings and the number of readings per day.

Required readings and management fields will be pre-populated from the patient creation, but this can be edited.

### Step 3

If the patient needs to take medication then this can be specified to mealtime and before bed medication fields, which can be seen on scrolling down further.

To add a medication, click on the **+** button next to the relevant meal.

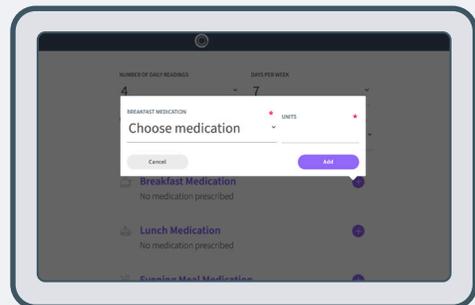

### Step 4

Choose the required medication from the drop-down box and the dosage, which you would like them to take. Click the **add** button.

### Step 5

If you do not complete both fields then an error message will occur. Please complete the fields or press cancel if the **+** button is pressed accidentally.

### Step 6

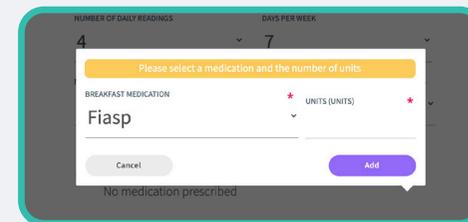

When you click **Save** a popup will appear asking if you have informed the patient.

If you have not already informed the patient, click **No**, and you will be able to send a message to the patient.

Please refer to **Guide 20** for further information on messaging patients.

### Step 7

Repeat the above process for any medication. When the patient uploads a blood glucose reading, the patient app will prompt the patient to enter the units of medication they have taken for that mealtime.

### Step 8

At the bottom of this screen you can also review the **Change history** of the record. Click **Save** when you have finished editing.
