# SEASCANN

by  SKAGINN 3X

## The Power of Information from Catch to Consumer

An EU-funded Horizon 2020 Project

## Empowering Sustainable Fishing

Data generated about the catch is available in real time to several stakeholders, including fisheries, processors, regulators and consumers.

## Empowering Profitable Operations

Operations on land have a pipeline of live data from their fleet, enabling a real-time assessment of value and better planning for processing and market placement.

## Empowering Informed Consumers

This information also allows consumers to be more informed and supports them in selecting superior product and sustainable operations.

See [skaginn3x.is/seascann](http://skaginn3x.is/seascann) for more information and to follow along with developments.

Although the objectives and fundamental technology behind SEASCANN are well established, the precise implementation of the system is still in development. Accordingly, information about the project presented here is subject to change.

*Fast and accurate automated grading maximizes quality and minimizes discards.*

## SEASCANN Stakeholders

SEASCANN lays the groundwork for a responsible, sustainable and profitable fishing sector by harnessing the power of information for all stakeholders.
