

# Virtual Queuing.

Eliminate the no.1 source of guest frustration by incorporating a virtual queuing solution into your Attractions.io app. Our virtual queuing technology enables guests to join lines for popular rides directly from their smartphone, and receive a notification from your park's mobile app when it's time to ride.

## No more waiting in-line.

Free guests to explore the rest of your park and squeeze more thrills into their day. Minimise contact and promote social distancing by removing some physical lines.

## Give guests what they need.

Automatically send guests push notifications when it's their time to ride. And, provide interactive wayfinding from anywhere on-site to help guests reach the entrance on time.

## Increase secondary spend.

Use direct messages and encourage guests to grab a bite to eat at nearby outlets while they wait. Use Bluetooth beacons to trigger exclusive discounts at nearby stores.

An Attractions.io survey recorded that 84% of theme park guests prefer virtual queuing to waiting in a physical queue. Allowing them to explore other rides with shorter waits, explore retail outlets or grab a bite to eat.

"You can see that these guys have really thought about this app. From the great visuals to the brilliant way that the virtual queue function works. A clever innovation indeed!"
