This month we focus on resources for Increasing equity of PBIS through cultural responsiveness. Discipline disproportionality (especially for students of color, male students of color, and students with disabilities) is one of the most significant problems in education today (US Government Accountability Office, 2013). This month’s video provides clear guidance about how the principles of PBIS can be applied to reduce discipline disproportionality and increase academic performance, with examples.

The framework of the video focuses on a 5-point intervention approach:

- Collect, use, and report disaggregated discipline data
- Implement a behavior framework that is preventive, multi-tiered, and culturally responsive
- Use engaging academic instruction to reduce the opportunity (achievement) gap
- Develop policies with accountability for disciplinary equity
- Teach strategies to neutralize implicit bias
