☰ Skin Resurfacing Balm

CALMING HERBAL CREAM FOR POST-LASER TREATMENT

Skin Resurfacing techniques, e.g. high percentage Peels, Light therapy, Microdermabrasion and Laser Resurfacing will benefit from application of Skin Resurfacing Balm after the initial healing process has completed.

After Microdermabrasion, Light Therapy and Peels no downtime is expected and the product can be applied as protection and home care immediately.

While after Laser Resurfacing the skin needs to heal for several days. At the physicians advice Skin Resurfacing Balm can be applied, as soon as the healing process is finished.

The soft, fast penetrating cream provides a pleasant, cooling sensation for the irritated skin. The perfect aid as a 24-hour caring system which can be applied several times a day, as desired.

Application

Apply Skin Resurfacing Balm for calming the skin after intensive exfoliation or laser treatments. Massage gently into affected areas of the skin.

ACTIVE SUBSTANCES

- **Herbal extracts of:** Ruscus Aculeatus, Centella Asiatica, Calendula Officinalis, Horse Chestnut and Echinacea; for soothing, calming, strengthening
- **Bisabolol:** (derived from Chamomile) Has anti-inflammatory effect
- **Farnesol:** For regeneration and anti-bactericidal benefits
- **Essential oil of Lavender:** Natural perfume with harmonizing effect energizing, soothing, healing and stimulating. Stimulates cellular growth and regeneration

ESSENTIALS

PROF.
150 ml
Ref.
5504P

- **The skin profile is left looking more healthy, vital and radiant**
- **The removal of waste products is promoted**
- **The skin's supply of nutrients and oxygen is increased**
- **Specific promotion of the skin's circulation**
- **Stimulates the skin's natural function**
- **Has an activating and regenerating effect**

Revigorating Face Mask

CIRCULATION-PROMOTING GEL MASK

Metabolically-deficient, pale and pasty skin frequently demands a special stimulus to revive it. This includes activating its natural functions, which can be visibly achieved by boosting its circulation. The higher metabolic activity achieved as a result of this increases the skin's supply of nutrients and oxygen and enhances its capacity to absorb moisture.

Revigorating Face Mask is an extraordinary gel mask and is intended exclusively for use by professional beauticians. Under their control, the stimulating mask is used as a "preparatory" mask in the cubicle. The visibly reddened skin is able to absorb subsequent active substance preparations better and is left looking vital and healthy at the end of treatment.

Suitable for all skin types, with the exception of very sensitive and reddened skin.

Application

Using a brush, apply Revigorating Face Mask onto the cleansed skin, leaving out the eye area, as follows:

1. Neckline, neck
2. Forehead, nose, chin
3. Finally, the cheek area

Immediately remove the mask again using a compress. The 30-60 seconds in which the mask is allowed to work in are generally sufficient to visibly boost the circulation.

Tip: Before applying the mask, it is vital to draw the customer's attention to the fact that the circulation will be perceptibly boosted. A sensation of heat and tingling is perfectly normal and completely safe.

ACTIVE SUBSTANCES

- **Stinging nettle extract:** Stimulates and promotes the circulation
- **Nicotinic acid methyl ester:** Vitamin B₆ component, rapidly penetrates the skin and dilates the blood vessels up to and including visible reddening with a sensation of heat

ESSENTIALS

- **Combats premature skin aging**
- **Smoothes and firms the skin**
- **Increases the skin's moisture**
- **Clarifies all skin profiles with a tendency towards impurities**
- **Models the facial contours**
- **Revitalizes tired and slack skin**
- **Supports the skin's natural regeneration process**

5540P

Thermo Face Mask

SELF-HEATING MASK

Thermo Face Mask is presented in powder form in pre-packaged portions. The mask powder is mixed with water to form a paste and is applied onto the skin, where it reveals itself to be a true "panacea" amongst masks.

Firstly, the well-apportioned thermal effect is characteristic of the way in which it works: following an even increase, the mask reaches a temperature of approx. 42°C, with a continuous warming period of approx. 15 minutes and an even decline in temperature. This enables the mask, which hardens during the warming period, to function as both a catalyst and an occlusive wrap at the same time. On one hand, the artificial "fever situation", with a temperature increase up to 42°C, allows the vessels to dilate and improves active substance penetration into the skin. On the other hand, the cooled and hardened mask shell ideally "seals" the active substances in by means of constricting the vessels. This physical process is coupled with an impressive lifting effect.

The perceptible effect of the mask can be seen after just one application: clear skin, well-moisturized and balanced, with firm and smooth facial contours.

A radiantly beautiful result for all skin types.

ACTIVE SUBSTANCES

- **Calcium sulfate:** Stabilizer
- **Zink oxide:** High absorption capacity

Application

Step 1: Protect the customer's hairline (e.g. with paper tissues).

Step 2: Apply the active substance concentrate corresponding to the skin's requirement onto the areas of skin to be treated and press in gently. Allow to work in for a few minutes.

Step 3: Generously cover the entire facial skin with a W/O emulsion, preferably Extra Rich Convenience Cream or Relaxing Massage Cream. Pay particular attention to covering the eyebrows. Cover the eyes with moist cotton wool pads to protect the brows and lashes.

Step 4: Mix the content of a film bag (440 g powder) in 300 ml warm water (20-25°C) to form a smooth paste.

Step 5: Apply the mixture onto the face, neck (taking care if the thyroid is sensitive to pressure) and neckline using a spatula or, better still, a tablespoon. Leave out the eye area and the mouth area (or include after consulting the customer). Allow the mask to work in for 15-20 minutes.

Step 6: Lift the mask from the customer's face like a shell. Have the customer "smile" to do this. The shifted facial characteristics make removing the mask easier. Remove any residues with the aid of cleansing lotion. (Optimal active substance absorption is concluded; there is no reason not to cleanse the surface of the skin at this point.)

Step 7: Subsequently apply a care cream.

Thermo Face Mask is also suitable for treating the hands.

Important note: Never pour Thermo Face Mask residues into the sink. Simply allow mask residues to dry on and dispose of them in the domestic refuse.

ESSENTIALS

PROF.
200 ml
Ref.
5580P

- **Stimulation of the microcirculation, circulation and lymph circulation**
- **The skin tissue is strengthened, lifted and firmed**
- **Promotion of waste product removal**
- **Outstanding, sliding massage preparation**
- **Neutral odor**

☰ Relaxing Massage Cream

RICH MASSAGE CREAM (W/O EMULSION)

A massage preparation with a particularly smooth and rich consistency is often desired for both the face and the body in the cubicle.

Relaxing Massage Cream meets precisely this wish and accompanies a professional massage with the pleasant sliding properties of a water-in-oil emulsion.

Relaxing Massage Cream enables facial massages which have the aim of stimulating the microcirculation, the circulation and the lymph circulation in such a way that collections of fluid are mobilized. In this manner, the metabolism is mobilized and lymph accumulations in the skin tissue are reduced via the circulation and lymphatic flow. This enables e.g. puffiness beneath the eyes to be smoothed. The skin is additionally left looking smoother and more supple.

Application

To massage the face and body, apply Relaxing Massage Cream generously and massage in.

ACTIVE SUBSTANCES

- **Bisabolol:** Calming, soothing
- **Avocado oil:** Particularly rich in oleic acid, palmitic and linoleic acid; the phytosterols contained in the oil help to support the skin's barrier function
- **Orange oil:** Balancing, harmonizes via the sense of smell in the spirit of aromatherapy

ESSENTIALS

- **Intensive treatment for distressed skin**
- **Treats rough, chapped, problem skin areas, e.g. hands, feet, elbows**
- **Relieves minor skin redness**
- **Soothing and anti-inflammatory effect**

PROF.
200 ml
Ref.
5520P

Application

Herbal Skin Ointment is a unique, superior quality cream for problem areas.

Apply on the affected skin areas and massage it gently.

Herbal Skin Ointment

HERBAL CREAM FOR THE PROFESSIONAL TREATMENT IN THE CUBICLE

Herbal Skin Ointment is an intensive healing cream for the treatment of distressed skin on the face, body, hands, feet & elbows. The preparation penetrates easily and provides healing properties quickly. A combination of coneflower (Echinacea), known for speeding up the healing process, bisabolol oil with its anti-inflammatory effect and farnesol for regeneration underline the convincing properties of this product. The skin's condition normalizes after only a few days of application. Discomfort and pain decrease with use.

ACTIVE SUBSTANCES

- **Coneflower extract (Echinacea):** For speeding up the healing process
- **Bisabolol:** Oil has anti-inflammatory effect
- **Farnesol:** Helps regeneration
- **Lavender oil:** Natural perfume with harmonizing effect

- **Odourless**
- **Ideal replacement for tap water**
- **Tonic for mask solutions**
- **Paraben free**

Application

Mix PEEL-OFF MASKS and MESSAGE FLEECE into a smooth paste with the specified quantity of Mask Activator and then use them as recommended immediately.

Apply DERMAFLEECE MASKS directly to the skin using sponges soaked in Mask Activator.

PROF.
1000 ml
Ref.
5590P

Mask Activator

ACTIVATING TONIC FOR MASK SOLUTIONS

In addition to other unwanted residues, chlorine and lime can pollute tap water significantly. Fluctuations in individual chemicals occur depending on the region, however. It is therefore best to avoid these unwanted components of tap water in addition to the everyday environmental influences (e.g. ozone and exhaust fumes) that are almost impossible to escape.

Applying Mask Activator, a tonic that is demineralised using reverse osmosis during manufacture, allows this to be achieved very effectively.

JANSSEN COSMETICS recommends using Mask Activator whenever PEEL-OFF MASKS and MESSAGE FLEECE solutions need to be created and DERMAFLEECE MASKS need to be moistened.

Mask Activator provides a good foundation, which is crucial for the effectiveness, product quality and skin-friendliness of the respective mask preparation.

It is suitable for every skin type, including very sensitive skin.

ACTIVE SUBSTANCES

- **Glycerine:** A natural moisturising factor obtained from plants

PROF.
5 x 1 pc
Ref.
8205P

- **Incomparable structure with perfect fit**
- **Noticeably cools and refreshes**
- **Intensively moisturizing and skin-smoothing**
- **Visible care success within a short time**
- **Ideal active substance carrier and booster**
- **For all skin types**
- **Easy to apply**

Biocellulose Mask

THE ALL-ROUNDER AMONGST MASKS FOR ACTIVE SUBSTANCE CONCENTRATES

Innovation and precision in product development lead to increased performance and comfort in the beauty salon treatment. The new Biocellulose Mask is proof of this. It offers a mask medium with outstanding characteristics and with unusual physical properties: very flexible and absolutely insoluble in water, it bears similarity to natural skin.

Each individual mask consists of a finely structured biocellulose membrane which hugs all of the facial contours to offer a perfect fit like a second skin. The minute biocellulose fibers form a three-dimensional network. This is particularly absorptive for the hydrating active substance solution which is used to soak the Biocellulose Mask, making it an effective active substance carrier.

The comfort is immediately noticeable during application: the mask membrane lies gently on the skin, hugging it. It cools in a remarkable manner and thoroughly soaks the upper layers of skin with high quantities of moisture. Both in addition to and in combination with a JANSSEN COSMETICS concentrate, each application really hits the spot: the all-rounder amongst masks is transformed into a skin type-specific specialist in the beauty salon (see Skin Applets).

Application

Prepare the skin as usual (cleansing, peeling). Apply an active substance concentrate corresponding to the skin type and press in gently.

1st step: Pull open the sachet at the tab, remove the contents and place onto a plate. Carefully unfold until the facial oval is lying fully on the plate. The Biocellulose Mask is located centrally between two protective carrier layers: a blue fleece and a white nylon fabric.

2nd step: Slowly peel off and dispose of the blue fleece. Now place the Biocellulose Mask onto the customer's face and press on gently. The second carrier layer consisting of nylon fabric (white) now points upwards. Simply peel this off as well.

3rd step: Adapt the Biocellulose Mask to the facial contours. To do this, stroke the mask smooth using a spatula to create a "second skin". Stroke out any air bubbles.

4th step: Allow to work in for 15 -20 minutes.

5th step: Peel the Biocellulose Mask off and continue the treatment as desired or conclude it (e.g. massage or concluding cream).

Tip: The mask offers particularly pleasant cooling and refreshment on hot days and/or if the skin is irritated.

However, certain treatment situations also require more warmth. In such cases, simply heat the sachet in a warm water bath (30-35°C) for a few minutes before opening. Apply the mask as described and allow it to work in with an additional warm compress on top.

ACTIVE SUBSTANCES

- **Sorbitol polymer:** Biotechnologically derived polysaccharide, obtained from plant substrates (maize and soya) by means of fermentation, forms an elastic film on the skin and binds water molecules, intensively and sustainably moisturizes the upper layers of skin down to the depths, leaving the skin feeling particularly soft and supple
- **Long-chain hyaluronic acid:** Moisturizing and moisture binding
- **Glycerin:** Trivalent alcohol, constituent of plant-based lipids, moisture-binding, reduces the horny skin's trans-epidermal water loss
- **Collagen:** Moisturizing and moisture-binding, lifts the skin
- **Aloe vera:** Hydrates and soothes the skin

PROF.
3 x 1 pc
Ref.
8206P

- **2-in-1 mask for the face and neck that fits perfectly**
- **Improves the appearance of existing wrinkles immediately, including on the neck**
- **Moisturises and smoothes intensively**
- **Cools and refreshes noticeably**
- **Visible results very quickly**
- **Ideal active-substance carrier and booster**
- **Should be applied as a luxury care product in a PLATINUM CARE treatment sequence**

Biocellulose Mask Face & Neck

AN ANTI-AGEING MASK FOR THE FACE AND NECK

Our Biocellulose Mask Face & Neck is a luxury bio-cellulose mask. The skin-firming anti-ageing mask for the face and neck moisturises the skin intensively and by doing so leaves it looking smoother and younger. Enriched with apple stem cells and blueberry extract, the nourishment from this innovative premium product not only treats the face to noticeable results within a very short space of time, but also the demanding wrinkle-prone skin on the neck.

The apple stem cells protect the skin's stem cells and preserve its youthful radiance, while the blueberry extract acts as an antioxidant and prevents premature photoageing.

Every single mask consists of a finely structured bio-cellulose membrane that clings to the contours of the face and neck and fits like a second skin. The tiny bio-cellulose fibres form a three-dimensional network. This is particularly receptive to our Effect Serum, which the Biocellulose Mask Face & Neck is soaked with.

The Biocellulose Mask Face & Neck relaxes and refreshes the skin immediately. The organ is given a new lustre, absolute smoothness and a new firmness.

Application

Prepare the skin as usual (cleansing and peel).

Step 1: After cleansing the skin, apply skin specific serum onto the skin and gently press it in. Avoid the eyes and the skin around them.

Step 2: Open the mask sachet and remove and unfold the contents. The mask will be between a layer of blue fleece and a layer of white nylon. Remove the blue fleece first. Place the bio-cellulose mask over the face and neck and gently press it down. Now remove the layer of white nylon. Fit the mask snugly to the face and neck contours and smoothe out any air pockets with a spatula.

Step 3: Leave the mask on for 15-20 minutes so that it can take effect.

Step 4: Remove the Biocellulose Mask Face & Neck before continuing your treatment sequence as desired or ending it.

ACTIVE SUBSTANCES

- **Sorbitol polymer:** This is a biotechnologically obtained polysaccharide. It is obtained from plant substrates (corn and soya) using fermentation. It forms an elastic film on the skin, locks in water molecules and moisturises the organ intensively for a long period of time, beginning with the outer layers and then penetrating right through to the inner layers. It leaves the skin feeling uniquely soft and smooth
- **Apple stem cells:** The innovative apple stem cell extract in this mask supports the vitality of the skin's own stem cells and restimulates their activity. Stem cells are the source of all tissue and play a very important role in the regeneration of skin. Optimal protection and the supply of key nutrients can maintain the vitality of the skin's stem cells, allowing their wrinkle repair potential to be exploited to the greatest possible extent
- **Blueberry extract:** This is rich in amino acids, vitamins, antioxidants and essential fatty acids. It protects the skin from premature photoageing
- **Glycerine:** Trivalent alcohol, constituent of plant-based lipids, moisture-binding, reduces the horny skin's trans-epidermal water loss

PRODUCTION PROCESS

The manner in which the biocellulose masks are obtained is biotechnology in its consummate form: microorganisms are cultivated in a nutrient mass consisting of coconut milk.

In this way, a fine and dense network consisting of tear-resistant cellulose is created by means of fermentation. It offers particularly impressive storage potential and is able to absorb one hundred times its dry weight.

As soon as the 3-dimensional nanostructure of the newly obtained biocellulose has matured, the mask membrane is available. Following a complex purification process, it is trimmed to the shape of the face, stabilized between a nylon carrier (white) and a fleece layer (blue) and moistened with the active substance solution. Finally, everything is hygienically packaged in a sachet for easy storage.

CARRIER CONCEPT FOR EFFICIENT SKIN CARE

In reconstructive surgery, the biocellulose membrane is vital as a wound dressing for temporary substitution of the skin substance. Due to its extraordinary healing success (e.g. in the case of burns), classic plasters rapidly declined in importance. A new carrier concept was born and is now also making its mark in the field of cosmetics.

OPTIMUM APPLICATION IN THE BEAUTY SALON

The Biocellulose Mask can be effortlessly integrated into each treatment as the customary "mask break". Individually, its application offers a particularly effective form of short-term treatment. In both cases, the horny layer's moisture is significantly increased and the skin surface is visibly smoothed. The addition of a concentrate also supplies the skin with special active substances coordinated to the relevant skin type. The concentrate's active are transported into the skin even more readily when the Biocellulose Mask is used.

- Noticeably cools and refreshes
- Intensively moisturizing and skin-smoothing
- Almost instant nourishing effect
- Ideal alternative to a collagen fleece or a bio cellulose mask

Application

Prepare skin as usual (cleanse, scrub).

1st step: Open sachet. The mask is protected by two sheets of clear film. Remove the first sheet of protective film and the cut-outs for eyes and lips.

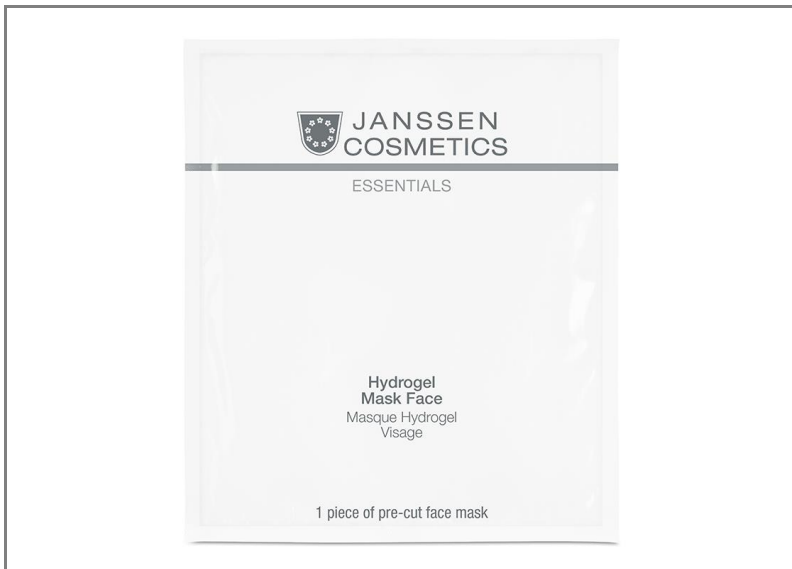

2nd step: Apply skin type specific ampoule, rub in lightly.

3rd step: Remove the second film, place Hydrogel Face Mask on face, pushing it on gently. Follow the shape of the face with the mask.

4th step: Leave on for 10-15 minutes.

5th step: Pull Hydrogel Face Mask off and continue with the planned treatment or finish off.

Summertime Tip: Store Hydrogel Mask Face in the refrigerator. This will make the treatment even more refreshing.

Hydrogel Mask Face

REFRESHING ALGAE-BASED FACE MASK

A Hydrogel Mask Face gives tired skin a refreshing boost. This unique treatment smooths the skin and has an intensively moisturising effect. The fat-free base of this clear hydrogel is based on carrageenans, natural polysaccharides obtained from the red algae species *Chondrus crispus* (Irish moss). Enriched with hyaluronic acid and HYALUROSMOOTH™, it can visibly reduce wrinkles caused by dryness.

Hyaluronic acid moisturises the skin intensively and ensures that the skin texture looks smoother only a few minutes after application. Plant-based hyaluronic acid, obtained from the seeds of the senna bush (*Cassia angustifolia*), forms a protective film on the skin that binds water and pads out fine lines. The skin is intensively nourished with moisture, and looks smoother and more radiant.

The Hydrogel Mask Face is easy to apply and has a pleasantly refreshing and moisturising effect. The innovative gel consistency ensures that the active ingredients are transferred effectively onto the skin.

The result: Soothingly refreshed and visibly smoother skin.

ACTIVE SUBSTANCES

- **Carrageenan polymer:** Biopolymer obtained from red algae (*Chondrus crispus*). *Chondrus crispus* can be found on the European and North American coasts of the Atlantic
- **Hyaluronic acid:** Extremely moisturising and moisture retaining, marked water-binding properties
- **Hyalurosmooth™:** Polysaccharides obtained from the seeds of the Indian senna plant (*Cassia angustifolia*). Due to its water-binding and smoothing properties, HYALUROSMOOTH™ could be described as a plant-based hyaluronic acid equivalent
- **D-Panthenol:** D-Panthenol is a provitamin of B5 that is turned into pantothenic acid (vitamin B5) in the skin. Panthenol has a moisturising effect and promotes the skin's natural regeneration

PROF.
10 x 1 pc
Ref.
8208P

- Noticeably cools and refreshes
- Reduces signs of tiredness below the eyes
- Intensively moisturizing and skin-smoothing
- Reduces puffiness
- Soothes irritations
- Almost instant nourishing effect

Hydrogel Mask Eye

PUFFINESS REDUCING ALGAE-BASED EYE PATCHES

These refreshing eye patches are a treat for tired eyes and reduce puffiness. The fat-free basis of this clear hydrogel is based on carrageenans, natural polysaccharides obtained from the red algae species *Chondrus crispus* (Irish moss). They contain moisturising and soothing active ingredients that relieve irritated skin and smooth small wrinkles caused by dryness.

EYELISS™ helps to reduce puffiness and bags under the eyes. The active ingredient complex contains hesperidin and two peptides and strengthens the skin's capillary membranes, which tend to become permeable with age, thereby preventing the tissue from swelling up due to excessive fluid loss. At the same time, it stimulates the lymphoid follicles, thereby improving the drainage of excess tissue fluids. Cornflower and witch hazel extracts refresh the skin, relieve irritation and have a soothing effect.

The patches follow the shape of the eye area and do not fall off. The innovative gel consistency ensures that the active ingredients are transferred effectively onto the skin.

The result: the eye area instantly looks more radiant. Reduces fine lines and puffiness. Effective against bags under the eyes.

Application

Thoroughly cleanse and dry area around the eyes before applying.

1st step: Apply Eye Flash Fluid, gently massage in.

2nd step: Open sachet. The eye patches are protected by two sheets of clear film. Remove the patches and pull off the protective film.

3rd step: Place patches below the eyes, pushing them on gently.

4th step: Leave on for 10-15 minutes.

5th step: Pull patches off and continue with the planned treatment or finish off.

Summertime Tip: Store Hydrogel Mask Eye in the refrigerator. This will make the treatment even more refreshing.

ACTIVE SUBSTANCES

- **Carrageenan polymer:** Biopolymer obtained from red algae (*Chondrus crispus*). *Chondrus crispus* can be found on the European and North American coasts of the Atlantic
- **Eyeliss™:** Reduces bags under the eyes with three active molecules: hesperidin methyl chalcone, dipeptide valyl-tryptophan (vw) and the peptide Pal-GQPR. The molecules have the following properties: hesperidin methyl chalcone makes the capillary membranes less permeable. The dipeptide valyl-tryptophan (vw) stimulates the lymphatic circulation. The lipopeptide Pal-GQPR improves the skin's firmness and elasticity
- **Cornflower floral water:** Cornflower floral water has a soothing and astringent effect
- **With hazel extract:** Is obtained from the leaves of the Hamamelis shrub, which grows in North America; has an astringent effect and soothes irritations
- **D-Panthenol:** D-Panthenol is a provitamin of B5 that is turned into pantothenic acid (vitamin B5) in the skin. Panthenol has a moisturising effect and promotes the skin's natural regeneration
- **Glycerine:** Trivalent alcohol, constituent of plant-based lipids, reduces transepidermal water loss
