

## SambaSafety redefines safety culture with unprecedented driver monitoring solution

*Two years after acquiring Vigillo, SambaSafety delivers the industry's first and only combined CSA and MVR monitoring solution for regulated fleets*

DENVER -- June 17, 2019 -- [SambaSafety](#), the market leader in mobility risk data solutions, today announces a groundbreaking enhancement to their Qorta monitoring platform. By incorporating CSA and MVR data into a single monitoring solution, SambaSafety now provides the regulated trucking industry with the most comprehensive [driver monitoring solution](#) in transportation.

“Since our initial launch of MVR monitoring solutions back in January, we are very excited to now include CSA monitoring into the Qorta platform,” said Steve Bryan, executive VP and GM, SambaSafety Transportation. “Qorta should be the platform of choice for any organization that is truly committed to enabling a culture of safety.” Bryan continues, “A reactive mindset cannot form the foundation to support a positive safety culture.”

With the Qorta monitoring platform, Safety Managers can proactively stay ahead of new roadside inspections and violations through near-real-time information summarized via carrier and driver scorecards. Also enabled is a preview of the new CSA IRT model, mandated by the FAST Act. Planned for release this year, the model utilizes Item Response Theory (IRT) methodology to measure a motor carrier's safety culture with a single score.

Qorta's comprehensive monitoring solution, Q Transportation offers a unique ability to continuously monitor drivers for violations, license status, medical certifications and endorsements, on- or off-duty, or in company or personal vehicles. By aggregating CSA and MVR data, robust scorecards elevate data into actionable intelligence, and empower decision-makers to enhance their safety culture through dramatic improvements in cost savings, productivity, a company's image, and overall safety and stability.

### About SambaSafety

Since 1998, SambaSafety continues to be the pioneer and leading North American provider of [cloud-based mobility risk management software solutions](#) for organizations with commercial and non-commercial drivers. Through the collection, correlation and analysis of driver information, SambaSafety helps employers identify high-risk drivers and enforce safety policies; insurers to make informed decisions; and background screeners to perform accurate, efficient pre-hire checks.
