Logistics

Skylo provides logistics companies with continuous communications and visibility to global teams. Leaders can optimize cost, improve route management, make informed decisions, and take immediate action. Global logistics vehicles often travel to places that have unreliable or no cellular coverage and require an end-to-end platform that provides continuous communications to optimize routes, address maintenance issues, improve driver safety, and eliminate cargo loss.

Skylo keeps your fleet connected 100% of the time

Skylo provides a secure, reliable, and cost-effective platform for large-scale deployment of fleet connectivity and visibility, delivering real-time actionable insights to everyone across the entire value chain, even when there is no cellular connectivity.

With Skylo, logistics teams can receive extremely granular data about where their goods are at any point on the globe, in a digestible format that allows customers to quickly pivot if problems occur. With this, companies get the intelligence required to manage their supply chains effectively and keep business on track.

This new constant stream of micro-reporting is enabled by a combination of low-cost Internet of Things (IoT) technology and narrowband satellite communications, allowing goods to be pinpointed at any moment, anywhere under the sky.

Monitor, locate and communicate with your entire fleet. Anywhere under the sky.

Skylo Solution Benefits

SKYLO HUB

SKYLO APPS

Your Virtual Command Center

- Monitor equipment and integrated sensors in real-time, even in remote locations
- Integrate 3rd party sensors via BLE or wire
- Keep deliveries on time with complete visibility on fleet location and movement
- Predict fleet maintenance with on board diagnostics (OBD-II) for current and historical insights

- Detect when a cargo door opens or closes with e-lock sensors to improve security
- Manage cargo temperature and humidity to keep perishables safe and fresh
- 2-way messaging and SOS alerts, even when there is no cell coverage
- Increase customer satisfaction with complete supply chain visibility for on-time deliveries

SKYLO SOLUTION

- Real-time location & productivity reporting
- 2-way emergency messaging & SOS alerts for distress, even when there is no cell coverage
- Ruggedized IP67-compliant Skylo Hubs ensure survivability in the most harsh environments, including sweltering heat & freezing temperatures
- Flexibility to power Skylo Hubs using solar panel or direct power
- Interface supports a wide range of third party sensors via BLE or wire
- 3GPP approved offering & Link Layer 128-bit encryption
- Skylo Apps, mobile or web, are a Virtual Command Center to the entire value chain
- Skylo Connect offers secure satellite network for always-on connectivity and APIs for easy integration into customer apps
