

One Identity Starling Connect

BENEFITS

- Unifies governance for on-premise, hybrid and cloud deployments
- Simplifies compliance for access activities and policies
- Accelerate deployment of applications — and the provisioning and de-provisioning of users

Introduction

Imagine a world where your governance platform can, out of the box, connect to the most popular SaaS application available on the market. A world where you are up-and-running in hours or days, instead of weeks or months. A world where connections are made using a standard protocol that enables you or your partners to easily interface to all those systems.

The One Identity world delivers that dream today. With Starling Connect which enables your organization's digital transformation by giving you easy connectivity to your SaaS platforms through a consistent API, rapid deployment and unparalleled ease of use.

Today, more than ever, organizations must address the proliferation of cloud-based applications. While these applications often provide convenient and flexible access for employees and customers, they also presents a new set of management and security challenges for IT and line-of-business managers.

For efficiency and simplicity, an organization's Identity and Access Management (IAM) solution needs to provide an aggregated view of identities across all systems. Plus, an IAM solution should enable managers to easily define and enforce the policies of their governance initiatives, including those that are on-premises, hybrid and cloud.

Control the Cloud

Starling Connect delivers easy connections to the most popular SaaS applications using System for Cross-Domain Identity Management (SCIM) to extend governance capabilities and the exchange of user identities data.

A cloud based, SaaS offering, Starling Connect extends your current investment in the identity governance capabilities to the cloud and reduces time to onboard new cloud applications. Starling Connect builds upon One Identity Manager or other IAM system to unify governance, extend access controls, ensure compliance and reduce the time it takes to provision / deprovision users.

Starling Connect Key Features

Unify All

Unify security policy information from multiple sources to mitigate security risks. Operate in a hybrid model to extend provisioning and to synchronize cloud applications' users, groups (including group memberships) and containers based on a standardized SCIM v.2.0 schema.

Connect All

Reduce the time it takes to seamlessly include cloud target applications into your IAM lifecycle and governance processes.

Govern All

Provide real-time governance reports that detail which resources are in your environment (on-premises, hybrid and cloud), who has access to them, and when and why that access was granted or terminated.

About One Identity

One Identity helps organizations get identity and access management (IAM) right. With our unique combination of offerings, including a portfolio of identity governance, access management, privileged management and identity as a service solutions, organizations can achieve their full potential – unimpeded by security, yet safeguarded against threats.
