One Identity Starling Identity Analytics & Risk Intelligence

Actionable Insights – Get smarter about risk

Security is evolving. Historically, Identity and Access Management (IAM) focused on securing the enterprise but now it must also enable an organization's digital transformation. Get IAM right with an Identity as a Service (IDaaS) solution that reduces risk for such business initiatives. Support your organization's digital transformation with a solution that enables you to detect threats and efficiently inspect anomalies so that you can make decisions, prioritize actions and remediate risk.

With Starling Identity Analytics & Risk Intelligence (IARI), you can reduce risk, and thus your attack surface, before bad behavior impacts the business. Accomplish this by eliminating unnecessary or dormant entitlement grants before someone can abuse or exploit them. Starling IARI exposes risk and access behavior enabling faster and improved security decision-making.

BENEFITS

- **Security intelligence** – Accelerates the discovery of problematic access rights and violations to enhance overall security
- **Managed visibility** – Increases awareness of potential risk factors or vulnerabilities to better prioritize investigative efforts
- **Analysis** – Improves risk detection and analysis accuracy to better focus remediation efforts
- **Reduced burden** – Decreases administrative effort by eliminating manual gathering and processing of entitlement data
- **TCO** - Improves efficiency and effectiveness and reduces overall operational costs

Actionable insights to help you determine:

- If an individual is actually using all of their entitlements
- If the granted entitlements are appropriate for a user's role
- Whether a user with significant entitlements should even have those rights
- How one user's rights compare to his/her peers, the rest of the organization or even between organizations
- Why a user's entitlements shifted from low risk to high

FEATURES

Data Source Modules and Collector

Automates the gathering, processing and transmission of entitlement data from targeted data sources and enables rapid addition of data sources.

Risk Classification Rules

Collects and processes entitlement grants into groups and classifications providing an entitlement base-line to identify high-risk entitlement areas.

User Risk Profile

Evaluates entitlement grants against the risk classification rules to identify high risk accounts. Changes to an account's risk profile triggers an alert and can be further validated with a business verification.

Alerting and Business Verification

Notifications when entitlement grants and resulting user risk profile changes move into "high risk" area enabling the profile "owner" to evaluate and analyze role certifications for business-impacting security threats.

Entitlement Usage Analysis

Identifies dormant access and initiates governance and/or remediation activities.

Access Comparison and Peer Group Analysis

Compares users and peer groups within and across organizations to determine populations of similar users and entitlements and pinpoint differences to prioritize where to troubleshoot access related issues.

Analytical Dashboards and Reports

Compliance and operational dashboards and reports of user identity, access and audit data deliver an instant review to better prioritize efforts of IT staff, business users, and auditors.

About One Identity

One Identity helps organizations get identity and access management (IAM) right. With our unique combination of offerings, including a portfolio of identity governance, access management, privileged management and identity as a service solutions, organizations can achieve their full potential – unimpeded by security, yet safeguarded against threats.
