Overview

INDUSTRY
Education, PreK-12

PROFILE
Franklin Pierce Schools is based in Tacoma, Washington, and has a total student enrollment of 8,000 and staff of 1200 across 18 sites.

CHALLENGE
Franklin Pierce Schools needed a way to organize their growing number of digital resources and apps. To eliminate frustration for teachers and students and to enable a better user experience, district leaders looked for a robust single sign-on (SSO) solution with rostering capabilities and usage analytics.

SOLUTION
Franklin Pierce Schools talked to neighboring districts about SSO solutions before selecting ClassLink in March 2017. District leaders recognized that implementing an SSO needed to be a thoughtful process with clear benefits and outcomes. “When you evaluate how much time this saves in the classroom, you’ll know you made the right decision”.

Franklin Pierce Experiences Big Gains in Efficiency and Usability

Challenge
Strategically, Liza Klumpar, Chief Technology Officer at Franklin Pierce Schools, had a desire to unify digital resources and provide one simplified access point. The district recognized that a single sign-on (SSO) solution would help achieve these goals. When they began evaluating SSO providers, efficiency and saving time over the long term were key motivators.

Solution
As Franklin Pierce Schools continued to research and compare SSO solutions, they discovered ClassLink offers many robust features, including Roster Server which securely delivers class rosters to publishers. In spring 2017, the district began with a soft roll out of ClassLink LaunchPad under the name “DORA”, which stands for District Online Resources & Applications. Since the launch of DORA, over 60 applications are offered with single sign-on. The district uses ClassLink My Files to give access to the school network and OneDrive from any device and location. For younger students, the district uses ClassLink QuickCard which allows users to scan a QR code to login to their laptop and gain access to DORA. Devices were quickly assigned and usage in the younger grades quickly climbed as a result.

Outcome
With the reduction of login barriers, students and teachers can now optimize time in the classroom. District leaders confirm the impact of improved access within the ClassLink Analytics dashboards. ClassLink Analytics puts usage information on the fingertips of district leaders who can download, share, and report back on how district resources are being utilized. This information helps district leaders as they evaluate the products and applications adding value and easily identify the ones that aren’t. Using DORA to access resources has become such a seamless operation that district leaders report they “can’t live without it”.

“ClassLink streamlined access and gave teachers back valuable minutes of instructional time.”
