

CoreSite InterConnect Gateway

YOUR PLATFORM FOR ENHANCED APPLICATION PERFORMANCE

MANAGING IT ARCHITECTURE FOR AN ENTERPRISE HAS NEVER BEEN MORE COMPLEX. In the increasingly multi-cloud world in which we operate, it's often difficult to have full visibility into workloads in order to make sure applications are operating at full efficiency. Enterprises that stand-out from the competition have focused on removing the distance between data, applications, partners and users; resulting in increased performance and customer satisfaction.

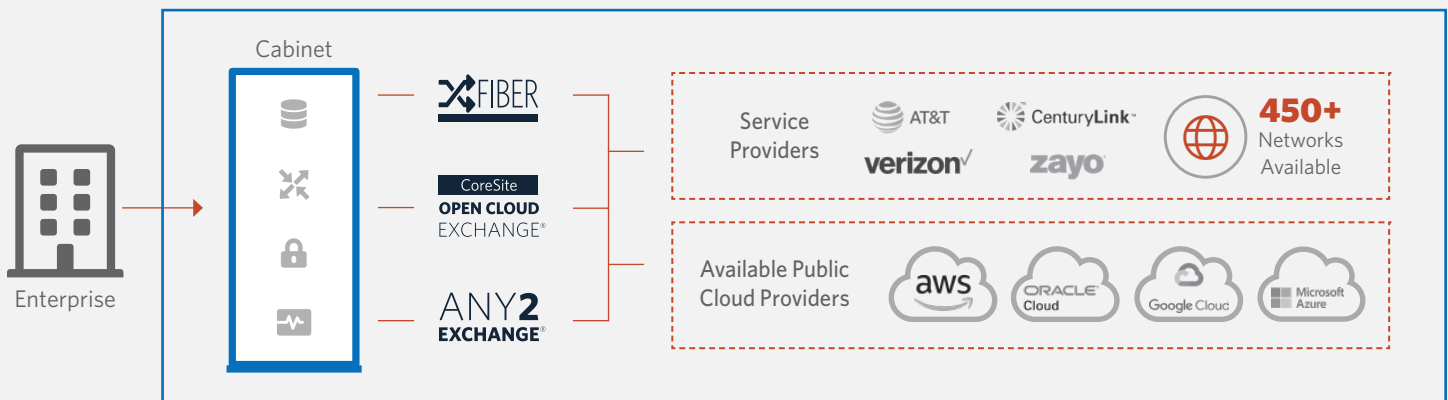

The CoreSite Interconnect Gateway™ (CIG) solution was created with optimal performance and cost efficiency in mind. CIG allows you to rapidly enhance your network performance.

HOW IT WORKS

This fully managed solution creates secure, high-bandwidth direct connectivity to leading public clouds, network service providers, data centers, and corporate offices to improve application performance and reduce network costs. Traffic is efficiently routed between vendors through router, firewall and WAN acceleration services on the platform.

- **A high-speed network connection** from your on-premises servers to the CoreSite data centers
- **A dedicated cabinet** in one of CoreSite's cloud-enabled, carrier-dense data centers
- **Network hardware** for routing, switching and security
- **High-performance fiber and virtual interconnects** to leading cloud providers and/or hundreds of network providers
- **Technical integration** provided by a CoreSite solution partner
- **24x7x365 management and monitoring** with an industry-leading SLAs

CORESITE DATA CENTER

The Era of the **End User**

The enterprises of today are embracing multi-cloud solutions but are struggling to deliver critical applications to increasingly disparate and mobile end users. IT is facing many challenges, including:

- **Increased network latency**
- **Distance data** is traveling to end users
- **Insufficient WAN architecture**
- **Limited IT experience** in modern architecture
- **Network congestion** on the public Internet
- **Limited monitoring and remediation** of distributed networks and applications
- **Limited bandwidth** from ISPs

End users are increasingly intolerant of latency or availability issues and will most likely stop using a solution that consistently performs poorly. That pushes solving these IT challenges to the top of the business priority list.

BENEFITS

NETWORK OPTIMIZATION

Identify deficiencies in the broader WAN architecture, resulting in an improved, modern design and reduced WAN costs.

BOOST APPLICATION PERFORMANCE

Reduce latency by an average of 40%* and deliver a consistent end-user experience

OUTSOURCE HEADACHES

This fully managed solution allows you to realize immediate benefits of outsourcing, including cost control, efficiency and compliance.

FINANCIAL AGILITY

Monthly billed solution means no capital investment costs and less financial risk.
