**Adacel Awarded Additional Tower Simulator Contract by
Canadian Department of National Defence**

New Contract Expands the Canadian DND Air Traffic Control Training Capability

Orlando, Florida (February 18, 2008) - Adacel, an industry leader in software integration, simulation development and speech recognition technology, announced details today about the Canadian Defence contract valued at around \$900,000 (Cdn) awarded to Adacel in late 2007.

Adacel will manage the program from the Company's facilities in Montreal, Canada. Under the terms of the contract with the Canadian Department of National Defence (DND) Adacel's Montreal operations will supply an additional 360 degree MaxSim tower simulation system to augment DND's ATC training capabilities. The simulator will be installed at the Canadian Forces School of Aerospace Control Operations (CFSACO) co-located at the Nav Canada Training and Conference Centre in Cornwall, Ontario.

The new simulator will join an existing Adacel 360 degree MaxSim tower previously purchased by DND and recently upgraded to Adacel's benchmark PC based visual system and state-of-the-art voice technologies. This will raise the total to five MaxSim towers installed at the complex in Cornwall; the other three with Nav Canada the national air traffic service provider for Canada.

"We are very proud that the Canadian military continues to entrust Adacel with providing the simulation capability so critical to training their next generation of operational air traffic controllers," said Fred Sheldon, Adacel's CEO North America. "With the close association of the Canadian and United States airspaces we are indeed gratified to supply our MaxSim tower simulation system to the entire group of national military and civilian ATC service providers on both sides of the border."

Mr Sheldon said Adacel's high fidelity tower simulation systems are now in use by the Canadian Forces and Nav Canada as well as the United States Air Force, Army, Navy and Marines and the Federal Aviation Administration (FAA). Adacel has delivered and actively supports more than 125 tower systems deployed with these agencies at their respective training academies and many operational airports. This number will increase with the latest DND acquisition and as the FAA exercises its intent to deploy simulators to key operational hubs throughout the USA under another contract awarded to Adacel in December 2007.

It is really no surprise that Adacel was named the "Best Simulator Provider" by an independent international poll conducted by ATM magazine in 2007.

About Adacel

Adacel (ASX: ADA) is a global software technology and systems integrator. The company is a leading developer of critical aviation, speech recognition, and defence simulation and security systems for government and commercial enterprises. Support services are available for all products including full-time, on-site operation and maintenance.

Adacel was established in 1987. The company's products can be found in many of the world's leading aviation entities, both civilian and military. Adacel's North American operations are headquartered in Orlando, Florida and the Company has offices in Washington, D.C., Montreal Canada, and Melbourne, Australia.
