

For Immediate Release

Innovation on Display - Adacel at World ATM Congress 2016

Orlando, Florida, (March 04, 2016) - Adacel today revealed their exhibition plans for the upcoming World ATM Congress (WATMC) taking place in Madrid, Spain 8-10 March. Again this year Adacel has expanded their stand size to accommodate demonstrations of a wider range of their aerospace related products.

Adacel has embarked on an effort to facilitate broader use of simulators as the primary training tool at operational ATC facilities. In keeping with that theme, visitors to Adacel's stand will have the opportunity to see and engage in some of Adacel's vision for the next generation in ATC simulators and training products.

Showcased will be the latest integration of a Virtual Reality Headset into an ATC tower simulator, along with Adacel's new BioTrack system, which provides the ability to track a user's gaze to simulate extreme horizontal and vertical field of views using an inexpensive, small footprint visual system. BioTrack will be demonstrated in Adacel's new small footprint training pod. Adacel will also unveil their 21st century interpretation of a long standing ATC training tool. Adacel's MaxSim Ultra – 3D tabletop system features an instructor touchscreen telestrator integrated with a fully functional, interactive ATC simulator to offer a new dimension to classroom training.

Adacel will also feature their operational Aurora ATM platform. Adacel's Aurora ATM automation system is a global system that manages all types of airspace and is scalable and configurable to meet present and future requirements, while incorporating the latest in CNS/ATM technologies. Working as part of a team of industry partners, Adacel recently adapted its Aurora ATM system conflict probe software to work in a Flight Information Exchange Model (FIXM) environment for a Trajectory Based Operation (TBO) and Unmanned Aircraft Systems (UAS) Integration Demonstration Project conducted at the Florida NextGen Test Bed at Embry-Riddle Aeronautical University in Daytona, Florida.

The WATMC combines a large-scale exhibition and world-class conference to showcase the latest trends and developments in air traffic control. As such WATMC provides an ideal venue for Adacel to exhibit the advanced capabilities of their products. Adacel will be located at stand #598.

About Adacel

Adacel is a leading developer of operational air traffic management systems, speech recognition applications and advanced ATC simulation and training solutions. The Company's products are widely used throughout Europe, North America, the Middle East and the Asia Pacific region. For more information about Adacel please visit www.Adacel.com.
