

For Immediate Release

Adacel Installs ATC Simulators at Southern Illinois University Carbondale

Orlando, Florida (May 01, 2013) – Adacel announced today that they have successfully completed delivery and installation of a suite of Air Traffic Control (ATC) training simulators purchased by Southern Illinois University Carbondale.

The simulators installed at the University's brand new Transportation Education Center, opened in October 2012, include Adacel's high-fidelity MaxSim Tower and several MaxSim Radar suites. Southern Illinois University offers an extensive aviation program and their instructors bring a wealth of experience in both the civilian and military sides of the ATC field that allows them to extend experiential knowledge to their students. Adacel's simulators will provide the immersive, hands-on environment needed to augment the University's ATC training curriculum.

Southern Illinois University Carbondale Transportation Education Center

“Southern Illinois University students who go on to pursue an ATC career will benefit from using virtually the same Adacel simulators that are used by the FAA and much of the U.S. military.”

Adacel's ATC simulation systems have proven to be very effective in developing higher proficiency levels at an earlier stage in controller training. The simulators are designed to provide ATC students with realistic hands-on practice that reinforces learning from the basics of phraseology and communications through the advanced skills required to be a competent controller. Southern Illinois University students who go on to pursue an ATC career will benefit from using virtually the same Adacel simulators that are used by the FAA and much of the U.S. military.

About Adacel

Adacel is a leading developer of operational air traffic management systems, speech recognition applications and advanced ATC simulation and training solutions. The Company's products are widely used throughout North America, Europe, the Middle East and the Pacific Rim. Adacel regularly wins awards for innovation in the modeling and simulation industry, including five consecutive Military Training & Technology 'Top Simulation and Training Company' awards.
