

For Immediate Release

Adacel Awarded \$2 Million Tower Simulator Ordered by FAA

New contract extends the presence of Adacel System simulators at FAA facilities across the country

Orlando, Fla. (October 24) – Adacel Systems announced today that it has received an order valued at \$2 million (US \$1.6 million) to supply three **MaxSim®** air traffic control tower simulators to the US Federal Aviation Administration (FAA).

This new order will support facilities in Chicago, IL, Miami, FL, and Ontario, CA, and be used to train developmental air traffic hired into those facilities. The **MaxSim®** simulation system will allow trainers to test, among many things, the security techniques, disaster management skills, and gate-to-gate management of aircraft, thus ensuring a safer flying environment.

“We are excited to have secured this new contract with the FAA,” said Adacel Systems North American CEO Fred Sheldon. “We value the relationship we have established with the aviation community across the United States, and believe this new order validates the quality and excellence of the MaxSim product line. It is the air traffic control simulator of choice for controllers worldwide, and we know that its installation in facilities around the world has made the skies safer for all travelers.”

The FAA already operates eleven **MaxSim®** tower simulators.

About Adacel MaxSim Simulator

The Adacel **MaxSim®** range of air traffic simulators is the leading Air Traffic Control simulation product suite in the world, having been selected by NASA, U.S. Air Force and over thirty air navigation service providers around the world for both radar control and visual control tower training.

MaxSim Tower and **MaxSim Radar** are the premier simulation solutions that meet the pressing needs of our community. Capable of integrated tower and radar operations, MaxSim Tower and MaxSim Radar have the flexibility to be operated in standalone configurations, or in multiple independent scenarios.

MaxSim products provide the functionality and features to address many areas, including: traffic flow studies, effective and efficient training of aviation personnel, airport sighting studies, gate-to-gate management, development of new airspace and airport management, techniques and procedures, disaster management planning and airport and aviation security studies.

About Adacel

Adacel is a software technology and systems integration leader across the globe. The company is a leading developer of critical security, aviation (air traffic management), speech recognition, and defense simulation and security systems for government and business entities.

Adacel's products can be found in more than 30 countries. With a stringent commitment to customer support and extensive research and development, Adacel is recognized as a leader in simulation system integration and software development.

Adacel was established in 1987 and listed on the ASX in 1998 (ASX: ADA). The Company's U.S. operations area headquartered in the ***I-4 Technology Corridor*** of Orlando, Florida. Adacel has offices in Washington, D.C., Montreal Canada, Melbourne, Australia and Manchester, United Kingdom.
