

BENEFITS OVERVIEW

EXCELLENT USER COMFORT

UNRIVALLED PERFORMANCE

MAXIMUM EFFICIENCY

✓ HIGH-CLASS EXPERIENCE

An elegant design combined with premium building materials gives users a feeling of cleanliness and comfort.

✓ HYGIENIC AND ODOR-FREE

The vacuum airflow vents away odors and reduces the risk of spreading airborne pathogens improving overall hygiene.

✓ HIGH-GRADE INSULATION

Units are fully insulated with 40 - 60 mm XPS foam (walls, floor and roof) providing a comfortable experience all year round.

✓ SELF-DIMMING LED LIGHT

Rooms feature adaptive ambient LED lighting creating a pleasing atmosphere and enhancing the overall experience.

✓ SAVE UP TO 90% WATER

With Jets™ vacuumator™ toilets only use 0.6 L per flush whereas traditional toilets use between 6 to 3 L per flush.

✓ MAXIMUM CAPACITY

Utilizing vacuum removes the need for toilets to refill before flushing allowing for a greater number of visits per hour.

✓ CATEGORY 5 PROTECTION

Built-in category 5 backflow protection allows units to be connected to any water source anywhere in the world.

✓ LESS RISK OF CLOGGING

The powerful vacuum pump greatly reduces risk of clogging compared to toilets that rely on gravity for transporting sewage.

✓ PLUG & PLAY SET UP

Units are connected via a simple plug & play set up saving precious time. The modular design allows for greater flexibility.

✓ SINGLE POINT OF CONTROL

Having all electrical installations in a central pump station provides a better overview and reduces the need for service and maintenance.

✓ SINGLE POINT OF DISCHARGE

All service points, discharge stations and truck pickup points can be located in a dedicated area outside the festival perimeter.

✓ EASY TO CLEAN AND MAINTAIN

Units are built from inorganic materials to protect against damp, mold and degradation making them easy to clean and maintain.

HIGH CAPACITY TOILETS

Our high capacity toilets feature Jets™ vacuum toilets offering outstanding performance combined with an award winning Scandinavian design, thus providing a great user experience while being capable of handling a large number of visits per hour. Units are connected via plug & play saving precious time while simultaneously allowing for a more flexible layout.

Rooms feature self-dimming ambient light creating a pleasing atmosphere and enhancing the overall experience. The outer frame (walls, floor and roof) is fully insulated with 40 - 60 mm XPS foam providing a comfortable experience all year round. In addition, the high insulation reduces the amount of energy required for heating and helps to prevent frost damage.

EventCubes are built strictly from inorganic materials to protect against damp, mold and degradation. The inside consists of fiberglass with a hidden pipe feed and wall-mounted fittings, giving the user a feeling of cleanliness and comfort. The smooth surfaces and floor can be cleaned quickly and efficiently.

LARGE PUMP STATION

The pump station works like a connection hub between all high capacity sanitation units. It distributes water supply, vacuum lines and power. This approach eliminates the need for pumpout trucks to maneuver through crowds, keeps visitors away from unwanted sights and ensures uninterrupted operation for the whole event. The crowd will never see, hear or smell them.

The pump station comes fully equipped with category 5 backflow protection. It utilizes a valve combined with a 50/170 L break tank to achieve this. Because of this it can be connected to any water source anywhere in the world including locations with strict water regulations. Having all electrical installations in a single unit reduces the need for service and maintenance.

EventCubes were developed using the expertise we have gathered from over 20 years of supplying high end cabins for the construction and event industry. We use premium components and materials to ensure that our products are exceedingly reliable with an exceptionally long lifetime.

20+ YEARS EXPERIENCE

We are Scandinavia's leading manufacturer of mobile solutions for the construction and events industry. We provide portable cabins to the biggest festivals in the Nordics. Our products cover almost all possible aspects of an event such as backstage solutions, ticket cabins, security centrals, sales cabins, refrigeration vehicles and mobile kitchens.

With over 20 years of experience we understand our customers' challenges and work with them to find the right solution quickly and efficiently, both during the sale and when the cabin is with the customer. This is reflected in our ability to consult customers, handle repairs and deliver spare parts.

Our vehicles are approved by TÜV Germany and are legal to drive in the EU and EEA, and in countries that recognize the UNECE regulation. We can therefore issue CoC documentation for the whole of the EU. Today we have sold over 20.000 cabins in over 30 countries including Denmark, Norway, Sweden, Germany, Holland, Poland, France, Switzerland and Australia.

SMALL YET POWERFUL

TOILET CAPACITY FLUSH CAPACITY WATER SUPPLY SEWAGE DISCHARGE

The pump station features the unique Vacuumator™ pump from Jets™. It creates vacuum, macerates sewage and discharges in one single-pass operation. The vacuumator™ pump is the most compact and reliable vacuum generator available for sanitary systems. It is highly efficient in transporting any combination of black and grey water under vacuum. Learn more at Jetsgroup.com.

Please note: The numbers below represent theoretical values based on simulations and empirical testing for a large pump station. The actual capacity will vary with different events where usage patterns can differ greatly. Learn more at Eventcubes.com or Eventcubes.de.

"EventCubes is a new sanitary system designed by Scanvogn for all types of events. By combining elegant design with modern technology it offers rental operators and event organizers a higher sanitation standard than ever before."

HIGH PERFORMANCE

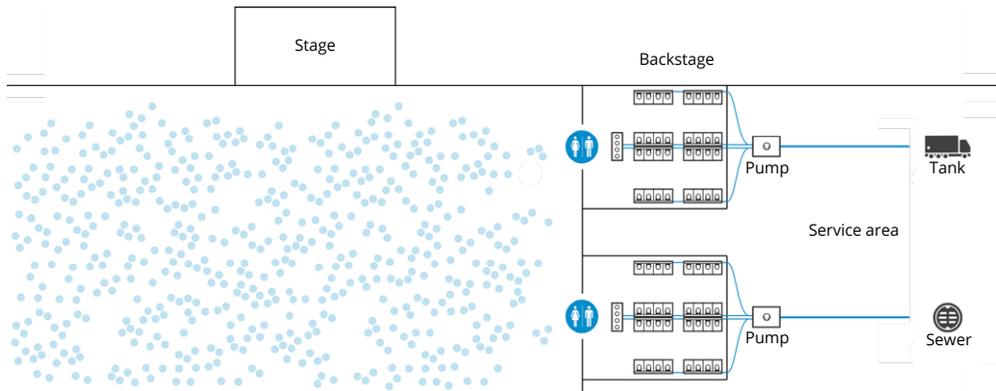

EventCubes offer a unique lineup of high-class sanitation units for events such as high capacity toilets, luxury toilets, accessible toilets, urinals and hand basins. Units rely on vacuum to transport sewage which reduces water usage by up to 90%, increases throughput by removing the need for toilets to refill and reduces the risk of clogging. It also puts less load on the local water supply network resulting in higher stability overall.

STREAMLINED SETUP

All units (except stand alone) are connected to a central pump station that distributes water supply, vacuum lines and power. This means all service points and discharge stations can be located in a dedicated area outside the festival perimeter. It eliminates the need for pump-out trucks to maneuver through crowds, keeps visitors away from unwanted sights and helps to ensure uninterrupted operation for the whole event.
