1. Insertion
Fold the baseplate along the short axis ensuring balloon is on the inside. Tube attachment must be at superior end (pointing upwards) Insert into the vagina

2. Placement
Ensure balloon surface is in contact with the fetal head Push device posteriorly, towards the coccyx Placement is similar to a posterior Ventouse / vacuum cup

3. Legs Flat
Place patients legs flat on the table before inflation

4. Inflation
Use the syringe to inflate using 180ml of sterile saline Close tap after filling to prevent fluid from leaking

5. Deliver baby
Perform Caesarean section using standard technique

6. Deflation & removal
Once baby has been delivered open the tap to drain the fluid Remove the device at the end of the procedure
