

Root Canal Post-Op Instructions

Your root canal is now complete. The canal or canals have been sealed and nature must now have time to repair the damage that the original irritant produced.

The tooth may be tender for several days. Motrin, Aspirin, or Tylenol will usually relieve this situation. If the discomfort is more severe, take the prescribed medication(s). If pain persists or increases, or if swelling develops, contact the office.

Do not chew on the tooth until all the tenderness is gone and the tooth is restored by your general dentist.
