

Available in the cloud and offered in a Light or Premium version, Xeebi Master is a fully virtualized and hardware-agnostic SMS Platform that offers geographical flexibility and access levels. Hosted on a private database we offer unparalleled reliability and give you the option to custom create your own routing that fits the scale of any size deployment.

Xeebi Master boasts an incredibly broad range of features and capabilities such as:

- SMPP and API integration
- Load sharing
- Content Filtering
- Message rule based filtering
- Whitelisting and Blacklisting
- Congestion Detection
- Flexible routing options
- Revenue and margin tracker
- Content modification
- Audit Logs
- Connection status data
- Robust Analytics
- Real time financial reporting
- Rate management
- Local Number Portability
- SMS Heartbeat Integration
- Carrier-grade, high-capacity performance
- 24/7 Support
- Videos and training material

We realize that each company has a different need and goal. Our job is to ensure that you can maximize the potential of your current messaging ecosystem or make your transition into messaging as seamless as possible.

→ **For MNO's**

Xeebi Master Premium is configured to help operators manage the revenue complexity and load balancing roadblocks that A2P messaging can bring. Retain oversight and monetize each message by offloading your SMSC.

→ **For Aggregators**

Xeebi Master helps aggregators maximize the potential of their messaging product and routing teams. Enable flexible trading options and ensure that each message reaches the intended destination. Ready to be deployed in less than 24hours, take control of your routing and provide your customers and partners with a unmatched service regardless of destination.

→ **New to Messaging?**

Xeebi Master Light makes it easy to get started. Set up your account, bind and route in minutes. Our video tutorials and support team are happy to help!
