

VIA's 10 Fundamentals for Wireless Collaboration

The VIA Difference

Among the many wireless presentation products on the market, only VIA combines wireless connectivity, true collaboration, and customizable features into one powerful wireless solution. Here are the 10 critical reasons to choose VIA:

- 1 True Collaboration**
VIA is much more than a simple "shared" presenter product. In an environment that's 100% interactive, VIA lets multiple participants edit a single document in real time.
- 2 User-Friendly Interface**
VIA couldn't be any easier to use. With an intuitive interface, you will be spending more time collaborating and less time calling the IT help desk.
- 3 Advanced Security and Data Encryption**
VIA provides 1024-bit encryption for all content and randomly generated dynamic security room codes. That's more security than most LANs offer!
- 4 Tried and Tested Technology**
With patents dating back to 2001, VIA's technology has been used in high-profile installations around the world since 2004.
- 5 Collaborative Feature Set**
VIA lets multiple meeting participants share any size file, chat, stream full frame rate HD video, annotate with a whiteboard feature, and save their work.
- 6 Customizable Features**
Instead of a one-size-fits-all wireless collaboration solution, VIA gives you two different models, plus a menu of functions for your specific installation.
- 7 Integrated Third-Party Apps**
Collaborate from anywhere inside VIA with MS Office®, Skype®, GoogleTalk®, Lync®, WebEx®, GoToMeeting®, Polycom®, Cisco® and more.
- 8 Site Management Solution**
VIA allows administrators to check and run reports on the status of each device, remotely maintain and configure devices and see who is logged in.
- 9 Stream from Apple and Android Devices**
VIA lets you walk into the meeting with any Apple or Android device and present on the main display.
- 10 Full 1080p60 Frame Rate Video**
No more annoying drop-outs and hiccups as your video streams from your tablet, phone, or laptop to the main display. Just clean, high-resolution video playback.
